# ESTIMATED VALUES OF SHIPMENTS, INVENTORY OWNED, AND ORDERS IN ALL MANUFACTURING INDUSTRIES

## TREND SUMMARY

**SHIPMENTS:** Manufacturers' shipments in January of \$1,954.3 million were 0.8 percent below the December value of \$1,970.6 million and 12.6 percent above the January 1961 value of \$1,735.2 million. Shipments in 1961, revised to include late returns, are estimated at \$23,884.8 million up 2.4 percent from \$23,326.7 million in 1960 and up 2.5 percent from \$23,306.4 million in 1959.

Although the shipments increase in 1961 over 1960 was only a relatively modest 2.4 percent the fact that shipments were higher is in itself something of an achievement since, after a low first quarter, all the margin in 1961 over 1960 was accumulated in the last five months. Of the groups of the Standard Industrial Classification nearly all made some advance during the year as compared with 1960 and most ended 1961 higher than in 1960. The groups, tobacco and tobacco products and transportation equipment, were the only groups with lower shipments in 1961 than in 1960, but while transportation equipment showed considerable advance during 1961 over comparable 1960 totals, tobacco and tobacco products showed little change during 1961 from 1960 totals. The durable goods group made the larger advance during the year. The first quarter total of 1961 was 9.3 percent or \$228.2 million below the first quarter of 1960 while the annual total was 1.0 percent or \$101.3 million above 1960. Non durable goods first quarter total was 1.4 percent or \$43.4 million above the 1960 first quarter and the annual total was 3.4 percent or \$456.7 million above 1960.

A longer-term comparison of annual shipments totals of the two groups, durable and non-durable, show non durable shipments advancing each year since 1957 over the previous year with 1961 shipments 12.7 percent (or \$1.6 billion) above 1957. The increase in each year was between three and five percent except in 1960 when shipments were only slightly higher (less than one percent) than shipments in 1959. Durable goods show erratic changes since 1957 with 1961 shipments only 1.5 percent (or \$0.14 billion) above 1957. The manufacturing groups most affecting the durable goods group are transportation equipment which in 1961 was 12.6 percent (or \$285.3 million) below 1957 shipments and iron and steel products which was only 1.8 percent or \$51.3 million above 1957. Together these two groups constituted 52.5 percent of durable goods shipments in 1957 and 49.4 percent in 1961.

January 1962 shipments are, by a good margin, the highest ever recorded for this month evidently continuing the forceful expansion of shipments that started last year. Even more interesting is the 17.9 percent increase this January over last in durable goods shipments, as compared to the 9.0 percent increase in non durable goods this January from last. Three of the six groups constituting durable goods, wood products, iron and steel, and non metallic minerals, each showed close to ten percent increase this January from last. Non-ferrous metals, and electrical apparatus both show about twenty-one percent increase. Transportation equipment showed a 34 percent or \$50 million increase this January from last.

**INVENTORIES:** Inventories owned by manufacturers at the end of January of \$4,455.2 million were 0.5 percent above the December value of \$4,431.6 million and 3.7 percent above the January 1961 value of \$4,296.5 million. Inventories held by manufacturers at the end of January of \$4,670.6 million were 0.5 percent above the December value of \$4,646.0 million and 3.1 percent above the January 1961 value of \$4,528.2 million. Inventories held under progress payment arrangements of \$215.4 million at the end of January were 0.5 percent above \$214.4 million in December and 7.0 percent below the \$231.6 million in January 1961.

Raw materials declined fractionally in January but goods in process increased 0.5 percent and finished products increased 2.0 percent. All components showed increases this January from last and were: raw materials 1.9 percent, goods in process 7.1 percent, and finished products 1.9 percent.

The ratio of total inventory owned to shipments was 2.28 in January, 2.25 in December and 2.48 in January 1961. The ratio of finished products to shipments was 0.73 in January, 0.71 in December and 0.81 in January 1961.

The present rebuilding of inventories which started in the third quarter of 1961 is continuing through January with both seasonally adjusted and unadjusted data showing increases. The preliminary January value unadjusted is 2.4 percent above the previous cyclical peak of \$4,350.6 million in May 1960 and 6.9 percent above the earlier cyclical peak of \$4,166.6 million in October 1957. Adjusted data for the same comparison shows the percentage increases as 3.0 and 6.1 respectively.

While the level already reached is above previous highs the lead does not appear excessive. The ratios of inventories owned to shipments, driven down quite sharply since the first quarter of 1961 by the considerable strength of shipments, remain at quite moderate values. Moreover, the accumulation, insofar as it can be examined without seasonally adjusted data at the major-group level, appears to be

largely the result of seasonal forces. The foods and beverages group shows a January value \$55.8 million (or 8.6 percent) above last January and the accumulation during the latter half of 1961 leading up to that level appears greater than usual especially in the fruit and vegetable preparations and flour mills industries. The tobacco and tobacco products group, while somewhat lower (\$7 million) this January from last, has had a higher level of inventories for over a year since the bumper crop of 1960. Seasonal accumulations in other groups (electrical apparatus and supplies for example which is \$15.9 million or 5.6 percent higher this January than last) are not easily identified as more or less than usual. Some accumulation has also occurred in the transportation equipment group. The large accumulation in non-ferrous metal products from January 1961 to January 1962 of \$44.4 million is part of the long-term accumulation continuing since December 1959 to date.

Preliminary January data show most changes among groups of the S.I.C. as quite small in percentage terms, the largest being increases of 7.6 percent and 6.1 percent in rubber products and tobacco products. In the Economic Use classification the consumers' sector is 0.7 percent higher in January from December and 1.9 percent higher from last January. The capital goods sector is down 0.6 percent from December to January and up 1.5 percent from last January to this.

ORDERS: The preliminary estimate of unfilled orders at the end of January of \$2,030.4 million was up 4.9 percent from the December estimate of \$1,934.9 million and up 7.1 percent from the January 1961 estimate of \$1,896.3 million. The January increase is the third consecutive increase in unfilled orders achieved despite the very high level of shipments. The present value is 10.1 percent above the most recent low of \$1,843.9 million set in October 1961.

While decreases from December to January were very small in percentage terms several increases were substantial. The largest were in industries producing largely for export of 30.8 percent, unclassifiable industries of 6.1 percent, and semi-durable consumers' goods of 5.5 percent. Most of the increase in the first named groups results from the placement of annual orders in the pulp and paper industry which are reduced throughout the year; in addition, however, the present January value is 16.0 percent above last January. Other large percentage changes over the year reflect, and perhaps anticipate, increasing activity in durable goods groups.

The total consumers' sector is down from last January to this by 1.5 percent. The capital goods sector is up by 3.1 percent. Construction goods are up 11.4 percent, motor vehicles and related industries up by 22.4 percent and intermediate goods and supplies up by 18.3 percent.

New orders received in January of \$2,049.8 million were 2.7 percent above the December value of \$1,996.1 million and 13.5 percent above the January 1961 value of \$1,805.7 million.

TRADING OUTLETS: Sales through manufacturers' trading outlets in January of \$223.2 million were 13.7 percent below the December value of \$258.5 million and 0.7 percent above the January 1961 value of \$221.6 million.

Inventories held at manufacturers' trading outlets of \$281.9 million at the end of January were 8.9 percent below the December value of \$309.6 million and 4.3 percent below the January 1961 value of \$294.6 million.

The decline in both sales and inventories in trading outlets this year will to some extent reflect the change in the accounting boundaries of the manufacturing plant which is being affected for the 1961 census. If a manufacturer can report realistically only on a combined basis both the manufacturing and distributing activities of the company total sales will be shown in the manufacturers' shipments. (The specific adjustments will be noted as they are incorporated in the totals.)

## INDUSTRIAL GROUPINGS

The industries shown in the Standard Industrial Classification Groups and the Economic Use Groups are listed low.

A single asterisk (\*) preceding the individual industry title indicates that the industry is shown separately Table 5 - Statistics for Selected Individual Industries.

A double asterisk (\*\*) preceding the individual industry title indicates that the industry is shown in Table 5 combined with one or more other industries. The industries grouped are listed in footnotes to the table.

The bracketed letters following the individual industry titles indicate the statistical series - shipments, inventories and orders-in which the industry is included monthly; (s) means the industry is included in the shipments series; (i) in the inventory series; and (o) in the orders series. Industries for which monthly coverage is not indicated are included in the all-industry and group totals estimates as described in the October 1961 report, page 82.

## CONCEPTS AND SOURCES

For further detail, and for description of methods used, see October, 1961 report, page 82.

### CONCEPTS

Shipments - (Tables 1 to 5) - represent an estimated projection, on a monthly basis, of the latest available Census of Industry values.

New Orders - (Tables 2 to 5) - This series is designed to indicate the rate at which new business is being received. It is defined as all New Orders Received during the period, at estimated selling values. Thus it covers total new orders, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month (and, therefore, will also be reported as shipments in the month received) or whether they will be added to existing backlogs.

Unfilled Orders - (Tables 2 to 5) - are defined at estimated selling value, at the end of the period stated, of orders received but not yet shipped (or treated as a sale), irrespective of work done on them or of stocks from which they can be filled.

Total Inventory Owned - (Tables 2 to 5) - represents the estimated book value of inventory owned by manufacturers in connection with manufacturing operations, whether held at plant or not, at the end of the period stated. It is made up of: raw materials, goods in process, finished goods of own manufacture at plant and warehouse, less value of inventory held but not owned which cannot be assigned to specific components. Since the series relates to manufacturing inventory only, value of goods purchased for re-sale is not included.

Inventory Held but Not Owned - (Tables 2 to 5) - represents, as far as possible, the portion of manufacturers' total inventory holdings which are no longer owned by the reporting manufacturers because of payments made on long-term contracts as work on these progresses. This item is applicable only to the relatively few industries where long-term contracts are common although, because of the nature of the item, the value per industry is high.

Because of variations in accounting methods there are a few cases where it is not possible to obtain values for this type of inventory. The estimated value shown for this item must therefore be considered to some extent incomplete.

Total Inventory Held - (Tables 2 to 5) - represents the estimated total value of manufacturers' inventory holdings in connection with manufacturing operations, regardless of ownership; it differs from inventory owned by the inclusion of amounts held under progress payments arrangements.

Inventory Components - (Tables 2 to 5) - (Raw Materials, Goods in Process, and Finished Products) are reported and compiled on the books of each manufacturer, i.e. there has been no attempt to define the components specifically for each industry.

The inventory components are always a breakdown of total inventory held, not of total inventory owned. In industries where these two items differ, due to the inclusion of inventory held but not owned (see above), it is not possible to obtain value of inventory owned by components since, where separate progress accounts are maintained, firms concerned can only state that, of total holdings, a certain amount is no longer owned by them. It is fairly obvious that the bulk of such payments apply to goods in process holdings but due to time lags in shipments and to prepayments some of the total value of inventory held but not owned would be applicable to finished products or raw materials.

Any comparisons of shipments/inventory ratios should be made using total inventory owned, not total inventory held, since the latter includes values which have already been written off to sales. If shipments/inventory ratios are desired using inventory components, rather than total inventory, a reasonable approximation to total inventory owned by components could be obtained by assuming that all inventory held but not owned had been included with goods in process.

Trading Outlets - (Table 7) - are defined as any establishments (other than retail stores) operated by manufacturers, apart from their plants or plant-warehouses, which carry stocks and make sales direct to customers. Sales offices which merely arrange sales but do not carry stock, or which carry small quantities only for demonstration purposes, are not included. Sales for this series represent direct sales from the outlet of goods manufactured by the owning or associated manufacturing company, with sales arranged by outlets but shipped direct from plant excluded wherever possible; goods purchased for re-sale from sources other than the owning or associated manufacturing company are also excluded except for the Petroleum Products industry group where a separation of purchased products is not feasible. Inventories for this series represents owned inventories held at Trading Outlets or in warehouses serving the trading outlets; again, goods purchased for re-sale are excluded except for the Petroleum Products industry.

Industries and Groupings - All individual industries (Table 5) and the Standard Industrial Classification groupings of industries used in Tables 3, 6 and 7, are defined according to the Standard Industrial Classification Manual. A list of the industries included in the Standard Industrial Classification groups and in the Economic-Use groupings of industries (Tables 4 and 6) will be found on page 53 of the bulletin.

### SOURCES

Monthly (or, in a few cases, quarterly) reports covering value of inventories and shipments are now submitted on a voluntary basis by 3,000 plants in 120 industries; in addition, 3,000 small plants in 100 of these industries report monthly shipments only. Of the first group, 1,025 plants in 83 industries also report new and unfilled orders. Four industries are included in the total shipments estimates by using data available from other Bureau series, and two of these are also included in the total inventory estimates.

FOOTNOTES TO TABLES

TABLE 1. - (1) Prince Edward Island and Nova Scotia combined for monthly estimates.

(2) Yukon and the Northwest Territories combined with British Columbia.

TABLE 2. - (1) Annual shipments values differ slightly from published Census of Industry totals due to inventory adjustments for certain industries where Census of Industry data represent production rather than shipments values.

(2) Part of the change in values from December 1958 to January 1959, is the result of the discontinuing of Trading Outlet operations for goods of own manufacture by some of the establishments reporting in the Electrical Apparatus Industries groups. The sales and inventories previously shown in Trading Outlets are now included in the relevant manufacturing industries and industrial groups.

(3) Part of the change in shipments and finished products inventory values from December, 1961 to January, 1962 is the result of the change in the method of reporting by some of the establishments in the Rubber Industries following the revision in the definition of a manufacturing establishment. Sales and inventories previously shown in Trading Outlets under Rubber Industries are now included in manufacturing since the redefinition of the manufacturing establishment has eliminated most of the manufacturers' trading outlets in this industry.

TABLE 3. - (1) See footnote (1), table 2.

(2) The value of Unfilled Orders and therefore, of New Orders for industries in S.I.C. groups - 1, 2, 3, 7, 8, 12, 14, 15, 16 and 17 is small, and sample coverage is not adequate to provide separate estimates for them.

(3) See footnote (2), table 2.

(4) The value of inventory held but not owned in this group is very small, and sample coverage is not adequate to provide separate data. Estimates for this type of inventory are included with Total Inventory Held; for all practical purposes this can be considered the equivalent of Inventory Owned.

(5) See footnote (3), table 2.

TABLE 4. - (1) See footnote (2), table 2.

(2) This grouping does not include the consumer portion of Motor Vehicles, nor of Heating and Cooking Apparatus; it does include the electronic equipment portion of Radios and Parts, (Telecommunication Equipment), and the office and store portion of Furniture. The bulk of Inventory Held but not Owned in this group is applicable to the electronic equipment portion of Radios and Parts.

(3) This grouping does not include trucks and buses.

(4) This group comprises only the 6 industries which cannot be fitted into any of the other groups because of the high proportion of total production exported. Shipments are not to be taken as total exports.

(5) See footnote (3), table 2.

TABLE 6. - (1) Ratios for this group were calculated using values of Total Inventory Held instead of values of Total Inventory Owned. See footnote (4), table 3.

TABLE 7. - (1) Includes sales and inventories of purchased goods for the Petroleum Refining Industry.

(2) See footnote (2), table 2.

(3) This grouping includes industries from the Textile group, the Clothing group, the Transportation Equipment group, the Non-Ferrous Metal Products group, the Non-Metallic Mineral Products group, and the Miscellaneous Industries group. The Leather Products group and the Printing, Publishing and Allied Industries group are not included since no firms in these industries reported Trading Outlets. The Tobacco Products group is not included because Trading Outlet values cannot be separated from plant values.

# ESTIMATED VALUES OF SHIPMENTS, INVENTORY OWNED, AND ORDERS IN ALL MANUFACTURING INDUSTRIES

### TREND SUMMARY

**SHIPMENTS:** Manufacturers' shipments in February, valued at an estimated \$1,906.8 million, were 1.3 per cent below the revised January value of \$1,931.3 million and 9.6 percent above the February 1961 value of \$1,739.2 million. Shipments for the two months of 1962 of \$3,838.1 million were 10.5 per cent above the comparable 1961 total of \$3,474.4 million and 7.2 per cent above the 1960 total of \$3,580.7 million.

Seven groups of the Standard Industrial Classification declined from January but half of the decline of \$42.6 million of the seven groups was concentrated in just two groups. Foods and beverages was down in February by \$12.3 million reflecting the lower shipments in the slaughtering and meat packing industry; non ferrous metal products was \$10.9 million lower. An increase of \$8.8 million in the knitting mills and clothing group and other increases totalling \$9.3 million left a net decline of \$24.5 million in February. The Economic Use Classification shows declines in the perishable consumers' goods group, the construction goods group and in all the miscellaneous groups. This February, all the miscellaneous groups show declines whereas in the last ten years at least one of the miscellaneous groups has shown an increase from January to February. The motor vehicles and related industries group and the industries producing largely for export group often show increases in February as compared with January while the intermediate goods and supplies group and the unclassifiable industries have recorded slightly more declines in February than increases.

The decline in February as compared with January is the third in the past ten years but perhaps more interesting is the fact that this February is the third month of consecutively lower shipments. The adjusted data show very clearly that shipments have levelled off, perhaps temporarily, after the considerable expansion during the last eight months of 1961. Despite this, the level of shipments remains high and the adjusted data show \$2,109.6 million for February, higher than any preceding value excepting that for December 1961 of \$2,126.0 million. The adjusted value for January of \$2,066.7 million is just below the August 1961 value of \$2,072.2 million leaving January and February respectively the fourth and second highest adjusted shipments values recorded for any month to date.

Durable goods shipments after a lengthy period of gradual decline recovered considerably in the latter months of 1961. In 1962, shipments have eased to a level which is moderately high for the early months of the year although February, which records a slight decline more usually shows a slight increase. Year over year comparisons show that durable goods in the two months of 1962 show an advance of 13.8 per cent over the comparable 1961 total while non-durable goods show an advance of only 8.2 per cent over the 1961 total. However, durable shipments for the two months of 1962 represent 2.0 per cent of the total shipments. For the like months of 1961, durable shipments were 40.8 per cent and for the same comparison were 43.1 in 1960. The gradual decline in durable shipments appears to date from late 1959 through 1960 to the early months of 1961. The per cent strength in durable shipments, although levelling off, has reversed the downward trend.

**INVENTORIES:** Inventories owned by manufacturers at the end of February of \$4,484.8 million were 0.7 per cent above the January estimate of \$4,451.6 million and 3.5 per cent above the February 1961 estimate of \$4,332.2 million. Total inventory held by manufacturers at the end of February of \$4,715.3 million was up 1.0 per cent from the January value of \$4,669.9 million and up 3.2 per cent from the February 1961 value of \$4,570.2 million. The value of inventory held under long-term contracts (progress payments) of \$230.5 million at the end of February was up 5.6 per cent from \$218.3 million in January and down 3.2 per cent from \$238.0 million a year ago. Components showed the following changes between January and February this year: goods in process up 1.6 per cent, goods in process less progress payments up 0.6 per cent, finished products up 2.1 per cent and raw materials virtually unchanged.

The ratio of total inventory owned to shipments was 2.35 in February, 2.33 in January and 2.49 in February 1961. The ratio of finished products to shipments was 0.77 in February, 0.75 in January and 0.82 in February 1961.

An increase in inventory owned by manufacturers from January to February has, in the past, been a fairly stable movement reflecting as it does the seasonal accumulation peculiar to tobacco products, wood products, paper products and textiles. The increase which is shown this year is particularly interesting for the seasonally adjusted data shows a decline, which indicates that the increase is less than the usual seasonal increase during a period when a fairly substantial cyclical accumulation would be more expected. Among the groups of the SIC that are dominated by seasonal movement only two depart appreciably from past years. Foods and beverages, showing a current decline of \$8 million, more usually show a decline of about \$25 million. Tobacco and tobacco products

currently showing a \$2 million increase usually shows an increase of \$15 million. These large variations from usual thus largely negate each other and, in fact, the \$33 million increase this February compares with the \$31 million increase that is the average of the last four years.

From the low point in July 1961 in both the adjusted and unadjusted series, inventories owned have advanced \$242.8 million in the unadjusted data and \$167.0 million in the adjusted data. This suggests that the difference of \$75.8 million is due to purely seasonal forces and most of it can be reasonably allocated among the groups which exhibit easily identifiable seasonality. They are: foods and beverages, tobacco and tobacco products, textiles (groups 5 and 6), wood products, paper products, electrical apparatus, non-metallic mineral products and chemical products. Three groups, iron and steel, transportation, and non-ferrous metals have since July increased a total of \$83.0 million and these groups may be fairly considered as holding the bulk of the non-seasonal accumulation although all groups hold varying shares of the non-seasonal accumulation.

Tracing the non-seasonal accumulation through the ratios of inventories owned to shipments shows that from the low of 2.43 in August 1961 the ratios of the iron and steel group have advanced steadily to 3.17 in February. The low of 2.43 is the lowest value since the same value was recorded in September 1959. Non-ferrous metals has also started a steady increase with the value of the ratio rising from a low of 2.04 in September 1961 to 2.56 in February. The ratios of the transportation group have moved differently. From a high of 2.82 in August 1961 the ratios for this group moved downward to 1.45 in December before climbing to 1.53 in January and 1.50 in February.

The ratio of total inventories owned to shipments for all manufacturing industries, using adjusted data for both series, was driven down sharply during the middle months of 1961. From the low of 2.07 in August 1961, the ratios have shown a distinct rise, although remaining at low to moderate values, which is the result both of rising inventory levels and moderating shipments values. For January the ratio was 2.16 and in February, 2.11.

ORDERS: The value of unfilled orders held by manufacturers at the end of February of \$2,032.5 million was up 0.6 per cent from \$2,020.5 million at the end of January and up 7.2 per cent from \$1,896.0 million at the end of February 1961.

New orders received by manufacturers during February of \$1,918.7 million were down 4.9 per cent from \$2,016.9 million in January and up 10.3 per cent from \$1,738.9 million in February 1961. New orders received for the two months of 1962 of \$3,935.6 million have a 2.5 per cent lead over shipments of \$3,838.1 million in the same period. In 1961, the same comparison shows a 2.0 per cent lead.

Changes in unfilled orders from January to February were greatest in percentage terms in semi-durable consumers' goods, and intermediate goods and supplies of minus and plus 4.0 per cent respectively. Nearly all groups of the Economic Use classification showed increases over the year in unfilled orders. The largest in percentage terms were: motor vehicles and related industries 22.9, other capital goods 18.0, intermediate goods and supplies 17.7, construction goods 13.3, and industries producing largely for export 12.9.

TRADING OUTLETS: Sales through manufacturers' trading outlets of \$222.4 million in February were down 1.2 per cent from \$225.0 million in January and up 1.7 per cent from \$218.6 million in February 1961.

Inventories held at manufacturers' trading outlets of \$265.8 million were down 4.6 per cent from \$278.6 million in January and down 7.0 per cent from \$285.9 million in February 1961.

(1) Includes Pig Iron, Steel Ingots and Castings, Rolled Iron and Steel Products and Ferro-Alloys. (2) The value of Inventory held but not owned in this industry is very small, and sample coverage is not adequate to provide separate data. Estimates of this type of inventory are included with total inventory held; for all practical purposes this can be considered the equivalent of inventory owned as well.

A single asterisk (\*) preceding the individual industry title indicates that the industry is shown separately in Table 5 - Statistics for Selected Individual Industries.

A double asterisk (\*\*) preceding the individual industry title indicates that the industry is shown in Table 5 combined with one or more other industries. The industries grouped are listed in footnotes to the table.

The bracketed letters following the individual industry titles indicate the statistical series - shipments, inventories and orders-in which the industry is included monthly: (s) means the industry is included in the shipments series; (i) in the inventory series; and (o) in the orders series. Industries for which monthly coverage is not indicated are included in the all-industry and group totals estimates as described in the October 1961 report, page 82.

## CONCEPTS AND SOURCES

For further detail, and for description of methods used, see October, 1961 report, page 82.

### CONCEPTS

Shipments - (Tables 1 to 5) - represent an estimated projection, on a monthly basis, of the latest available Census of Industry values.

New Orders - (Tables 2 to 5) - This series is designed to indicate the rate at which new business is being received. It is defined as all New Orders Received during the period, at estimated selling values. Thus it covers total new orders, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month (and, therefore, will also be reported as shipments in the month received) or whether they will be added to existing backlogs.

Unfilled Orders - (Tables 2 to 5) - are defined at estimated selling value, at the end of the period stated, of orders received but not yet shipped (or treated as a sale), irrespective of work done on them or of stocks from which they can be filled.

Total Inventory Owned - (Tables 2 to 5) - represents the estimated book value of inventory owned by manufacturers in connection with manufacturing operations, whether held at plant or not, at the end of the period stated. It is made up of: raw materials, goods in process, finished goods of own manufacture at plant and warehouse, less value of inventory held but not owned which cannot be assigned to specific components. Since the series relates to manufacturing inventory only, value of goods purchased for re-sale is not included.

Inventory Held but Not Owned - (Tables 2 to 5) - represents, as far as possible, the portion of manufacturers' total inventory holdings which are no longer owned by the reporting manufacturers because of payments made on long-term contracts as work on these progresses. This item is applicable only to the relatively few industries where long-term contracts are common although, because of the nature of the item, the value per industry is high.

Because of variations in accounting methods there are a few cases where it is not possible to obtain values for this type of inventory. The estimated value shown for this item must therefore be considered to some extent incomplete.

Total Inventory Held - (Tables 2 to 5) - represents the estimated total value of manufacturers' inventory holdings in connection with manufacturing operations, regardless of ownership; it differs from inventory owned by the inclusion of amounts held under progress payments arrangements.

Inventory Components - (Tables 2 to 5) - (Raw Materials, Goods in Process, and Finished Products) are reported and compiled as on the books of each manufacturer, i.e. there has been no attempt to define the components specifically for each industry.

The inventory components are always a breakdown of total inventory held, not of total inventory owned. In industries where these two items differ, due to the inclusion of inventory held but not owned (see above), it is not possible to obtain value of inventory owned by components since, where separate progress accounts are maintained, firms concerned can only state that, of total holdings, a certain amount is no longer owned by them. It is fairly obvious that the bulk of such payments apply to goods in process holdings but due to time lags in shipments and to prepayments some of the total value of inventory held but not owned would be applicable to finished products or raw materials.

Any comparisons of shipments/inventory ratios should be made using total inventory owned, not total inventory held, since the latter includes values which have already been written off to sales. If shipments/inventory ratios are desired using inventory components, rather than total inventory, a reasonable approximation to total inventory owned by components could be obtained by assuming that all inventory held but not owned had been included with goods in process.

Trading Outlets - (Table 7) - are defined as any establishments (other than retail stores) operated by manufacturers, apart from their plants or plant-warehouses, which carry stocks and make sales direct to customers. Sales offices which merely arrange sales but do not carry stock, or which carry small quantities only for demonstration purposes, are not included. Sales for this series represent direct sales from the outlet of goods manufactured by the owning or associated manufacturing company, with sales arranged by outlets but shipped direct from plant excluded wherever possible; goods purchased for re-sale from sources other than the owning or associated manufacturing company are also excluded except for the Petroleum Products industry group where a separation of purchased products is not feasible. Inventories for this series represents owned inventories held at Trading Outlets or in warehouses serving the trading outlets; again, goods purchased for re-sale are excluded except for the Petroleum Products industry.

Industries and Groupings - All individual industries (Table 5) and the Standard Industrial Classification groupings of industries used in Tables 3, 6 and 7, are defined according to the Standard Industrial Classification Manual. A list of the industries included in the Standard Industrial Classification groups and in the Economic-Use groupings of industries (Tables 4 and 6) will be found on page 53 of the bulletin.

### SOURCES

Monthly (or, in a few cases, quarterly) reports covering value of inventories and shipments are now submitted on a voluntary basis by 3,000 plants in 120 industries; in addition, 3,000 small plants in 100 of these industries report monthly shipments only. Of the first group, 1,025 plants in 83 industries also report new and unfilled orders. Four industries are included in the total shipments estimates by using data available from other Bureau series, and two of these are also included in the total inventory estimates.

FOOTNOTES TO TABLES

TABLE 1. - (1) Prince Edward Island and Nova Scotia combined for monthly estimates.

(2) Yukon and the Northwest Territories combined with British Columbia.

TABLE 2. - (1) Annual shipments values differ slightly from published Census of Industry totals due to inventory adjustments for certain industries where Census of Industry data represent production rather than shipments values.

(2) Part of the change in values from December 1958 to January 1959, is the result of the discontinuing of Trading Outlet operations for goods of own manufacture by some of the establishments reporting in the Electrical Apparatus Industries groups. The sales and inventories previously shown in Trading Outlets are now included in the relevant manufacturing industries and industrial groups.

(3) Part of the change in shipments and finished products inventory values from December, 1961 to January, 1962 is the result of the change in the method of reporting by some of the establishments in the Rubber Industries following the revision in the definition of a manufacturing establishment. Sales and inventories previously shown in Trading Outlets under Rubber Industries are now included in manufacturing since the redefinition of the manufacturing establishment has eliminated most of the manufacturers' trading outlets in this industry.

TABLE 3. - (1) See footnote (1), table 2.

(2) The value of Unfilled Orders and therefore, of New Orders for industries in S.I.C. groups - 1, 2, 3, 7, 8, 12, 14, 15, 16 and 17 is small, and sample coverage is not adequate to provide separate estimates for them.

(3) See footnote (2), table 2.

(4) The value of inventory held but not owned in this group is very small, and sample coverage is not adequate to provide separate data. Estimates for this type of inventory are included with Total Inventory Held; for all practical purposes this can be considered the equivalent of Inventory Owned.

(5) See footnote (3), table 2.

TABLE 4. - (1) See footnote (2), table 2.

(2) This grouping does not include the consumer portion of Motor Vehicles, nor of Heating and Cooking Apparatus; it does include the electronic equipment portion of Radios and Parts, (Telecommunication Equipment), and the office and store portion of Furniture. The bulk of Inventory Held but not Owned in this group is applicable to the electronic equipment portion of Radios and Parts.

(3) This grouping does not include trucks and buses.

(4) This group comprises only the 6 industries which cannot be fitted into any of the other groups because of the high proportion of total production exported. Shipments are not to be taken as total exports.

(5) See footnote (3), table 2.

TABLE 6. - (1) Ratios for this group were calculated using values of Total Inventory Held instead of values of Total Inventory Owned. See footnote (4), table 3.

TABLE 7. - (1) Includes sales and inventories of purchased goods for the Petroleum Refining Industry.

(2) See footnote (2), table 2.

(3) This grouping includes industries from the Textile group, the Clothing group, the Transportation Equipment group, the Non-Ferrous Metal Products group, the Non-Metallic Mineral Products group, and the Miscellaneous Industries group. The Leather Products group and the Printing, Publishing and Allied Industries group are not included since no firms in these industries reported Trading Outlets. The Tobacco Products group is not included because Trading Outlet values cannot be separated from plant values.

(4) See footnote (3), table 2.

# ESTIMATED VALUES OF SHIPMENTS, INVENTORY OWNED, AND ORDERS IN ALL MANUFACTURING INDUSTRIES

### TREND SUMMARY

**SHIPMENTS:** Manufacturers' shipments in March were valued at an estimated \$2,038.3 million, 8.1 percent above the revised February value of \$1,886.3 million and 5.2 percent above the March 1961 value of \$1,938.5 million. Shipments in the January-March period were valued at an estimated \$5,855.9 million, 8.2 percent above the comparable 1961 total of \$5,412.9 million.

Petroleum products was the only group of the Standard Industrial Classification to show a decline from February to March but this was a nominal \$300 thousand or 0.3 percent. The largest increases were \$30.7 million, or 14.1 percent, in iron and steel products, \$27.8 million or 14.4 percent in transportation equipment and \$25.5 million or 7.2 percent in foods and beverages. In two of these groups the increase reflected the increased activities of most of the component industries; in the transportation equipment group, most of the increase was due to the motor vehicle industry. This change can be examined more closely in the economic use classification, motor vehicles and related industries, which shows an increase of \$25.3 million or 15.4 percent from February. All groups in this classification showed increases, which is generally the experience of the last ten years, ranging this year in percentage terms, from the 15.4 percent noted above to 3.6 percent in the unclassified industries.

Durable goods shipments, after a lengthy period of gradual decline recovered considerably in the latter months of 1961. In the first quarter of 1962, durable shipments have eased to a level which is quite high for the first quarter and which is 12.1 percent above the first quarter of 1961 and 1.7 percent above the first quarter of 1960. Moreover, these gains have taken place with a backlog of unfilled orders that has lengthened continuously since October 1961. The low then in durable unfilled orders was \$1,436.0 million and the March value of \$1,622.0 million represents an increase in five months of 12.9 percent. Shipments in the non-durable group of \$3,369.2 million in the first quarter of 1962 were 5.5 percent above the first quarter of 1961 and 6.9 percent above the same quarter of 1960.

Although shipments almost invariably show an increase in March, as is shown this March, the essential point concerns the relative strength of the current increase after allowing for seasonal influences. The data adjusted for seasonality show a decline in March of \$89.9 million or 4.3 percent as against an increase of \$152.0 million or 8.1 percent in the unadjusted data. It would appear that the increase this year is less than that due from seasonal forces and while this may be shown later as quite correct, there is at the present time some room for amending this interpretation.

Inspection of the seasonal changes in the first quarter of recent years will show a change in the seasonal pattern which is considerably accentuated in 1960 and 1961. Current adjusted estimates are normally based on the average of the seasonal pattern of the last two years and it is a moot point whether the accentuated movement of 1960 and 1961 will extend into 1962 or whether the earlier trend will prevail. In such cases, the procedure adopted is to plot the seasonally adjusted estimate about half way between the earlier and the most recent trends and this procedure has been used at the present time.

The practical result of this is simply that the current seasonal adjustment may be overstated. It will be some months before the seasonal pattern can be clarified with any certainty and to the extent that cyclical forces may be operating on the seasonal, it may be much longer before the seasonal pattern can be considered finally determined. Notwithstanding this, the present estimate of the seasonal may be quite accurate and future adjustments negligible.

**INVENTORIES:** Total inventory owned by manufacturers at the end of March was estimated at a preliminary value of \$4,530.5 million up 0.7 percent from the revised value of \$4,499.0 million a month earlier and up 4.2 percent from \$4,346.9 million a year earlier. Total inventory held by manufacturers at the end of March at a preliminary value of \$4,763.7 million was 0.7 percent higher than the February value of \$4,731.2 million and 3.8 percent higher than the March 1961 value of \$4,591.3 million. The value of inventory held under long-term contracts (progress payments) was \$233.2 million in March, up 0.4 percent from \$232.3 million in February and down 4.6 percent from \$244.3 million in March 1961. Components showed the following changes between February and March this year: goods in process up 0.3 percent, goods in process less progress payments up 0.4 percent, finished products up 2.5 percent and raw materials down 0.4 percent.

The ratio of total inventory owned to shipments was 2.22 in March versus 2.39 in February and 2.24 in March last year. The ratio of finished products inventory to shipments was 0.75 in March against 0.79 a month earlier but was unchanged from March last year.

Revisions to February inventory owned data show an increase of \$47.4 million from January in the unadjusted series and a negligible increase in the seasonally adjusted series. This indicates that the increase was no more than seasonal and possibly marks the end of the cyclical accumulation which

started in mid 1961, increased vigorously for a few months and tapered off to the January-February plateau. At first sight, the increase in the adjusted series for preliminary March appears to contradict this interpretation. Further examination of the SIC groups will show that some of the recent apparent cyclical accumulation is the result of more-than-usual accumulation in groups with strong seasonal patterns. Thus it may well be a shift in the seasonal pattern in these industries rather than a cyclical accumulation.

Inventories owned increased \$31.6 million from February to March and the bulk of the accumulation is a \$25.4 million or 15.1 percent increase in tobacco and tobacco products. Other large value changes were increases of \$9.3 million in wood products, \$3.6 million in electrical apparatus and declines of \$5.8 million in foods and beverages and \$2.3 million in petroleum products.

Tobacco and tobacco products inventory displays a fairly consistent seasonal pattern that moves from a high usually in March (occasionally in April) to a low in October or November, and again to a high the following spring. The increase this March from the preceding seasonal low in November 1961 of \$56.5 million compares with \$63.7 million from the October 1960 low to the March 1961 high and with \$52.1 million from the November 1959 low to the March 1960 high. The seasonal decline during 1961 of \$42.2 million compares with \$49.4 in 1960, \$35.4 million in 1959 and \$40.3 million in 1958. Shipments during 1961 of \$329.4 million were 2.3 percent below \$337.0 million in 1960, 1.5 percent above \$324.6 million in 1959 and 7.9 percent above \$305.1 million in 1958. These trends are pointed up more clearly in the inventory owned to shipments ratios which averaged 5.75 in 1961 as against 4.97 in 1960, 4.72 in 1959 and 4.77 in 1958.

ORDERS: The value of unfilled orders at the end of March of \$2,077.7 million was 0.1 percent above the February value of \$2,075.2 million and 7.2 percent above the March 1961 value of \$1,938.1 million. Changes in unfilled orders among the groups of the economic use classification from March 1961 to March 1962 were largest in percentage terms in motor vehicles and related industries (+27.6), perishable consumer's goods (+25.1), other capital goods (+21.6), construction goods (+21.4), intermediate goods and supplies (+19.6), and heavy transportation (-15.0).

New orders received by manufacturers during March of \$2,040.8 million were 5.1 percent above the February value of \$1,941.0 million and 3.0 percent above the March 1961 value of \$1,980.6 million.

TRADING OUTLETS: Sales through manufacturers' trading outlets in March of \$232.8 million were 4.6 percent above \$222.6 million in February and 2.1 percent below \$237.8 million in March 1961.

Inventories at manufacturers' trading outlets of \$262.4 million at the end of March were 2.6 percent below \$269.4 million at the end of February and 5.6 percent below \$277.9 million at the end of March 1961.

(1) Includes Pig Iron, Steel Ingots and Castings, Rolled Iron and Steel Products and Ferro-Alloys. (2) The value of Inventory held but not owned in this industry is very small, and sample coverage is not adequate to provide separate data. Estimates of this type of inventory are included with total inventory held; for all practical purposes this can be considered the equivalent of inventory owned as well.

# INDUSTRIAL GROUPINGS

The industries shown in the Standard Industrial Classification Groups and the Economic Use Groups are listed below.

A single asterisk (\*) preceding the individual industry title indicates that the industry is shown separately in Table 5 - Statistics for Selected Individual Industries.

A double asterisk (\*\*) preceding the individual industry title indicates that the industry is shown in Table 5 combined with one or more other industries. The industries grouped are listed in footnotes to the table.

The bracketed letters following the individual industry titles indicate the statistical series - shipments, inventories and orders-in which the industry is included monthly: (s) means the industry is included in the shipments series; (i) in the inventory series; and (o) in the orders series. Industries for which monthly coverage is not indicated are included in the all-industry and group totals estimates as described in the October 1961 report, page 82.

## CONCEPTS AND SOURCES

For further detail, and for description of methods used, see October, 1961 report, page 82.

### CONCEPTS

Shipments - (Tables 1 to 5) - represent an estimated projection, on a monthly basis, of the latest available Census of Industry values.

New Orders - (Tables 2 to 5) - This series is designed to indicate the rate at which new business is being received. It is defined as all New Orders Received during the period, at estimated selling values. Thus it covers total new orders, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month (and, therefore, will also be reported as shipments in the month received) or whether they will be added to existing backlogs.

Unfilled Orders - (Tables 2 to 5) - are defined at estimated selling value, at the end of the period stated, of orders received but not yet shipped (or treated as a sale), irrespective of work done on them or of stocks from which they can be filled.

Total Inventory Owned - (Tables 2 to 5) - represents the estimated book value of inventory owned by manufacturers in connection with manufacturing operations, whether held at plant or not, at the end of the period stated. It is made up of: raw materials, goods in process, finished goods of own manufacture at plant and warehouse, less value of inventory held but not owned which cannot be assigned to specific components. Since the series relates to manufacturing inventory only, value of goods purchased for re-sale is not included.

Inventory Held but Not Owned - (Tables 2 to 5) - represents, as far as possible, the portion of manufacturers' total inventory holdings which are no longer owned by the reporting manufacturers because of payments made on long-term contracts as work on these progresses. This item is applicable only to the relatively few industries where long-term contracts are common although, because of the nature of the item, the value per industry is high.

Because of variations in accounting methods there are a few cases where it is not possible to obtain values for this type of inventory. The estimated value shown for this item must therefore be considered to some extent incomplete.

Total Inventory Held - (Tables 2 to 5) - represents the estimated total value of manufacturers' inventory holdings in connection with manufacturing operations, regardless of ownership; it differs from inventory owned by the inclusion of amounts held under progress payments arrangements.

Inventory Components - (Tables 2 to 5) - (Raw Materials, Goods in Process, and Finished Products) are reported and compiled as on the books of each manufacturer, i.e. there has been no attempt to define the components specifically for each industry.

The inventory components are always a breakdown of total inventory held, not of total inventory owned. In industries where these two items differ, due to the inclusion of inventory held but not owned (see above), it is not possible to obtain value of inventory owned by components since, where separate progress accounts are maintained, firms concerned can only state that, of total holdings, a certain amount is no longer owned by them. It is fairly obvious that the bulk of such payments apply to goods in process holdings but due to time lags in shipments and to prepayments some of the total value of inventory held but not owned would be applicable to finished products or raw materials.

Any comparisons of shipments/inventory ratios should be made using total inventory owned, not total inventory held, since the latter includes values which have already been written off to sales. If shipments inventory ratios are desired using inventory components, rather than total inventory, a reasonable approximation to total inventory owned by components would be obtained by assuming that all inventory held but not owned had been included with goods in process.

Trading Outlets - (Table 7) - are defined as any establishments (other than retail stores) operated by manufacturers, apart from their plants or plant-warehouses, which carry stocks and make sales direct to customers. Sales offices which merely arrange sales but do not carry stock, or which carry small quantities only for demonstration purposes, are not included. Sales for this series represent direct sales from the outlet of goods manufactured by the owning or associated manufacturing company, with sales arranged by outlets but shipped direct from plant excluded wherever possible; goods purchased for re-sale from sources other than the owning or associated manufacturing company are also excluded except for the Petroleum Products industry group where a separation of purchased products is not feasible. Inventories for this series represents owned inventories held at Trading Outlets or in warehouses serving the trading outlets; again, goods purchased for re-sale are excluded except for the Petroleum Products industry.

Industries and Groupings - All individual industries (Table 5) and the Standard Industrial Classification groupings of industries used in Tables 3, 6 and 7, are defined according to the Standard Industrial Classification Manual. A list of the industries included in the Standard Industrial Classification groups and in the Economic-Use groupings of industries (Tables 4, and 6) will be found on page 53 of the bulletin.

### SOURCES

Monthly (or, in a few cases, quarterly) reports covering value of inventories and shipments are now submitted on a voluntary basis by 3,000 plants in 120 industries; in addition, 3,000 small plants in 100 of these industries report monthly shipments only. Of the first group, 1,025 plants in 83 industries also report new and unfilled orders. Four industries are included in the total shipments estimates by using data available from other Bureau series, and two of these are also included in the total inventory estimates.

FOOTNOTES TO TABLES

TABLE 1. - (1) Prince Edward Island and Nova Scotia combined for monthly estimates.

(2) Yukon and the Northwest Territories combined with British Columbia.

TABLE 2. - (1) Annual shipments values differ slightly from published Census of Industry totals due to inventory adjustments for certain industries where Census of Industry data represent production rather than shipments values.

(2) Part of the change in values from December 1958 to January 1959, is the result of the discontinuing of Trading Outlet operations for goods of own manufacture by some of the establishments reporting in the Electrical Apparatus Industries groups. The sales and inventories previously shown in Trading Outlets are now included in the relevant manufacturing industries and industrial groups.

(3) Part of the change in shipments and finished products inventory values from December, 1961 to January, 1962 is the result of the change in the method of reporting by some of the establishments in the Rubber Industries following the revision in the definition of a manufacturing establishment. Sales and inventories previously shown in Trading Outlets under Rubber Industries are now included in manufacturing since the redefinition of the manufacturing establishment has eliminated most of the manufacturers' trading outlets in this industry.

TABLE 3. - (1) See footnote (1), table 2.

(2) The value of Unfilled Orders and therefore, of New Orders for industries in S.I.C. groups - 1, 2, 3, 7, 8, 12, 14, 15, 16 and 17 is small, and sample coverage is not adequate to provide separate estimates for them.

(3) See footnote (2), table 2.

(4) The value of inventory held but not owned in this group is very small, and sample coverage is not adequate to provide separate data. Estimates for this type of inventory are included with Total Inventory Held; for all practical purposes this can be considered the equivalent of Inventory Owned.

(5) See footnote (3), table 2.

TABLE 4. - (1) See footnote (2), table 2.

(2) This grouping does not include the consumer portion of Motor Vehicles, nor of Heating and Cooking Apparatus; it does include the electronic equipment portion of Radios and Parts, (Telecommunication Equipment), and the office and store portion of Furniture. The bulk of Inventory Held but not Owned in this group is applicable to the electronic equipment portion of Radios and Parts.

(3) This grouping does not include trucks and buses.

(4) This group comprises only the 6 industries which cannot be fitted into any of the other groups because of the high proportion of total production exported. Shipments are not to be taken as total exports.

(5) See footnote (3), table 2.

TABLE 6. - (1) Ratios for this group were calculated using values of Total Inventory Held instead of values of Total Inventory Owned. See footnote (4), table 3.

TABLE 7. - (1) Includes sales and inventories of purchased goods for the Petroleum Refining Industry.

(2) See footnote (2), table 2.

(3) This grouping includes industries from the Textile group, the Clothing group, the Transportation Equipment group, the Non-Ferrous Metal Products group, the Non-Metallic Mineral Products group, and the Miscellaneous Industries group. The Leather Products group and the Printing, Publishing and Allied Industries group are not included since no firms in these industries reported Trading Outlets. The Tobacco Products group is not included because Trading Outlet values cannot be separated from plant values.

# ESTIMATED VALUES OF SHIPMENTS, INVENTORY OWNED, AND ORDERS IN ALL MANUFACTURING INDUSTRIES

### TREND SUMMARY

**SHIPMENTS:** Manufacturers' shipments in April were valued at an estimated \$2,060.0 million down 2.9 percent from the revised March value of \$2,122.1 million and up 10.7 percent from the April 1961 value of \$1,861.4 million. Shipments for the four months of 1962 of \$7,999.8 million were 10.0 percent above the similar 1961 value of \$7,274.3 million.

In the general shipments decline in April from March values, only three groups of the Standard Industrial Classification showed increases and these were quite nominal. The largest value declines were \$17.0 million in iron and steel products, \$8.8 million in non-ferrous metal products, \$8.1 million in knitting mills and clothing, and \$7.2 million in electrical products. Only the motor vehicles group of the economic use classification showed a small increase in April. The total consumers' goods industries showed a \$17.2 million or 2.9 percent decline, the total capital goods industries showed a \$11.1 million or 7.2 percent decline, and construction goods showed a \$6.6 million or 4.3 percent decline.

Durable goods shipments for the first four months of 1962 were valued at \$3,404.4 million up 13.9 percent from the comparable 1961 value of \$2,987.9 million and up 4.0 percent from the comparable 1960 value of \$3,273.0 million.

Durable goods shipments display a fairly clear cyclical pattern that traced a decline through the second half of 1959, through 1960 to the early months of 1961. The considerable resurgence during the middle months of 1961 eased before the year-end and although durable shipments are still at a high level the turning point seems to have been reached. The backlog of unfilled orders had advanced continuously from November 1961 until the decline this April.

Shipments have declined from March to April in eight of the last ten years the exceptions occurring in 1958 and 1959. The current decline of \$62.1 million compares with \$77.0 million in 1961, \$110.0 million in 1960 and \$45.5 million in 1957 with increases of \$41.2 million and \$93.9 million in 1958 and 1959. The data adjusted for seasonal variation show an increase from March to April of this year of \$67.2 million.

**INVENTORIES:** Inventory owned by manufacturers at the end of April of \$4,517.2 million was 0.7 percent below the March value of \$4,549.5 million and 4.2 percent above the April 1961 value of \$4,334.2 million. Inventory held by manufacturers at the end of April of \$4,767.4 million was 0.4 percent below the March value of \$4,787.9 million and 4.2 percent above the April 1961 value of \$4,574.6 million. Inventory held under progress payment arrangements at the end of April of \$250.1 million, was 4.9 percent above the March value of \$238.5 million and 4.0 percent above the April 1961 value of \$240.5 million.

The ratio of total inventory owned to shipments was 2.19 in April, 2.14 in March and 2.33 in April 1961. The ratio of finished products to shipments was 0.74 in April, 0.72 in March, and 0.78 in April 1961.

The largest value declines from March to April among the groups of the Standard Industrial Classification were \$16.3 million in tobacco and tobacco products, \$13.3 million in foods and beverages, \$11.4 million in paper products and \$6.3 million in transportation equipment. The largest value increases were \$5.1 million in iron and steel products and \$4.7 million in electrical apparatus and supplies. In the economic use classification in the same period the total consumers' sector showed a \$25.9 million or 2.0 percent decline, the total capital goods sector a \$8.2 million or 1.8 percent decline and the construction goods industries a \$4.8 million or 1.1 percent increase. The miscellaneous groups showed changes of one percent or less.

Total inventory owned appears to be at a cyclical turning point after eight months of continuous accumulation from August 1961 to March 1962 and twenty months after the previous peak in July 1960.

The high in March 1962 of \$4,481.4 million in the adjusted series was \$205.8 million above the low of \$4,275.6 million in July 1961 and \$149.4 million above the previous high in July 1960 of \$4,332.0 million.

However, the level of inventories does not appear high in relation to the current level of shipments. The ratio of inventories owned to shipments (using the adjusted data for both series) while showing a rising trend over the eight months from August to March remains quite low and moreover has dropped to a very low value this April reflecting the downturn in inventories. In October 1957 the high of this ratio coincided with the high in the inventory owned accumulation but

lagged behind the inventory low in August 1958 by eight months. The behaviour of the ratio during the inventory high in 1960 was less certain: the ratio reached a high plateau in July 1960 but oscillated there before moving down nine months later in April 1961. The monthly ratios from that date have been driven down despite rising inventories, by the considerable strength of shipments which, in easing of late, have permitted the ratios to increase somewhat.

ORDERS: New orders received by manufacturers in April of \$2,027.0 million were 7.4 percent below the revised March value of \$2,188.7 million and 7.8 percent above the April 1961 value of \$1,880.6 million.

The backlog of unfilled orders at the end of April of \$2,108.8 million was 1.5 percent below the March value of \$2,141.9 million and 7.7 percent above the April 1961 value of \$1,957.2 million.

All groups of the economic use classification except the unclassifiable industries group showed declines in unfilled orders from March to April. The largest declines in percentage terms were in the motor vehicles group of 14.6 percent, the perishable consumers' group of 9.6 percent and the industries producing largely for export group of 4.9 percent.

Changes in unfilled orders from last April to this were generally large in percentage terms although only two groups showed declines. They were durable consumers' goods (7.0 percent) and heavy transportation equipment (12.6 percent). The largest increases were 24.6 percent in construction goods, 23.7 percent in other capital goods, 20.8 percent in intermediate goods and supplies and 19.5 percent in perishable consumers' goods.

TRADING OUTLETS: Sales through manufacturers' trading outlets in April of \$216.8 million were down 9.3 percent from the March value of \$239.0 million and up 0.4 percent from the April 1961 value of \$216.0 million.

Inventories held at outlets at the end of April of \$263.5 million were down nominally from \$263.9 million in March and down 5.8 percent from \$279.6 million in April 1961.

(1) Includes Pig Iron, Steel Ingots and Castings, Rolled Iron and Steel Products and Ferro-Alloys. (2) The value of inventory held but not owned in this industry is very small, and sample coverage is not adequate to provide separate data. Estimates of this type of inventory are included with total inventory held; for all practical purposes this can be considered the equivalent of inventory owned as well.

## INDUSTRIAL GROUPINGS

The industries shown in the Standard Industrial Classification Groups and the Economic Use Groups are listed below.

A single asterisk (\*) preceding the individual industry title indicates that the industry is shown separately in Table 5 - Statistics for Selected Individual Industries.

A double asterisk (\*\*) preceding the individual industry title indicates that the industry is shown in Table 5 combined with one or more other industries. The industries grouped are listed in footnotes to the table.

The bracketed letters following the individual industry titles indicate the statistical series - shipments, inventories and orders-in which the industry is included monthly: (s) means the industry is included in the shipments series; (i) in the inventory series; and (o) in the orders series. Industries for which monthly coverage is not indicated are included in the all-industry and group totals estimates as described in the October 1961 report, page 82.

## CONCEPTS AND SOURCES

For further detail, and for description of methods used, see October, 1961 report, page 82.

### CONCEPTS

Shipments - (Tables 1 to 5) - represent an estimated projection, on a monthly basis, of the latest available Census of Industry values.

New Orders - (Tables 2 to 5) - This series is designed to indicate the rate at which new business is being received. It is defined as all New Orders Received during the period, at estimated selling values. Thus it covers total new orders, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month (and, therefore, will also be reported as shipments in the month received) or whether they will be added to existing backlogs.

Unfilled Orders - (Tables 2 to 5) - are defined at estimated selling value, at the end of the period stated, of orders received but not yet shipped (or treated as a sale), irrespective of work done on them or of stocks from which they can be filled.

Total Inventory Owned - (Tables 2 to 5) - represents the estimated book value of inventory owned by manufacturers in connection with manufacturing operations, whether held at plant or not, at the end of the period stated. It is made up of: raw materials, goods in process, finished goods of own manufacture at plant and warehouse, less value of inventory held but not owned which cannot be assigned to specific components. Since the series relates to manufacturing inventory only, value of goods purchased for re-sale is not included.

Inventory Held but Not Owned - (Tables 2 to 5) - represents, as far as possible, the portion of manufacturers' total inventory holdings which are no longer owned by the reporting manufacturers because of payments made on long-term contracts as work on these progresses. This item is applicable only to the relatively few industries where long-term contracts are common although, because of the nature of the item, the value per industry is high.

Because of variations in accounting methods there are a few cases where it is not possible to obtain values for this type of inventory. The estimated value shown for this item must therefore be considered to some extent incomplete.

Total Inventory Held - (Tables 2 to 5) - represents the estimated total value of manufacturers' inventory holdings in connection with manufacturing operations, regardless of ownership; it differs from inventory owned by the inclusion of amounts held under progress payments arrangements.

Inventory Components - (Tables 2 to 5) - (Raw Materials, Goods in Process, and Finished Products) are reported and compiled as on the books of each manufacturer, i.e. there has been no attempt to define the components specifically for each industry.

The inventory components are always a breakdown of total inventory held, not of total inventory owned. In industries where these two items differ, due to the inclusion of inventory held but not owned (see above), it is not possible to obtain value of inventory owned by components since, where separate progress accounts are maintained, firms concerned can only state that, of total holdings, a certain amount is no longer owned by them. It is fairly obvious that the bulk of such payments apply to goods in process holdings but due to time lags in shipments and to prepayments some of the total value of inventory held but not owned would be applicable to finished products or raw materials.

Any comparisons of shipments/inventory ratios should be made using total inventory owned, not total inventory held, since the latter includes values which have already been written off to sales. If shipments/inventory ratios are desired using inventory components, rather than total inventory, a reasonable approximation to total inventory owned by components would be obtained by assuming that all inventory held but not owned had been included with goods in process.

Trading Outlets - (Table 7) - are defined as any establishments (other than retail stores) operated by manufacturers, apart from their plants or plant-warehouses, which carry stocks and make sales direct to customers. Sales offices which merely arrange sales but do not carry stock, or which carry small quantities only for demonstration purposes, are not included. Sales for this series represent direct sales from the outlet of goods manufactured by the owning or associated manufacturing company, with sales arranged by outlets but shipped direct from plant excluded wherever possible; goods purchased for re-sale from sources other than the owning or associated manufacturing company are also excluded except for the Petroleum Products industry group where a separation of purchased products is not feasible. Inventories for this series represents owned inventories held at Trading Outlets or in warehouses serving the trading outlets; again, goods purchased for re-sale are excluded except for the Petroleum Products industry.

Industries and Groupings - All individual industries (Table 5) and the Standard Industrial Classification groupings of industries used in Tables 3, 6 and 7, are defined according to the Standard Industrial Classification Manual. A list of the industries included in the Standard Industrial Classification groups and in the Economic-Use groupings of industries (Tables 3, 6 and 7) will be found on page 53 of the bulletin.

### SOURCES

Monthly (or, in a few cases, quarterly) reports covering value of inventories and shipments are now submitted on a voluntary basis by 3,000 plants in 120 industries; in addition, 3,000 small plants in 100 of these industries report monthly shipments only. Of the first group, 1,025 plants in 83 industries also report new and unfilled orders. Four industries are included in the total shipments estimates by using data available from other Bureau series, and two of these are also included in the total inventory estimates.

FOOTNOTES TO TABLES

TABLE 1. - (1) Prince Edward Island and Nova Scotia combined for monthly estimates.

(2) Yukon and the Northwest Territories combined with British Columbia.

TABLE 2. - (1) Annual shipments values differ slightly from published Census of Industry totals due to inventory adjustments for certain industries where Census of Industry data represent production rather than shipments values.

(2) Part of the change in values from December 1958 to January 1959, is the result of the discontinuing of Trading Outlet operations for goods of own manufacture by some of the establishments reporting in the Electrical Apparatus Industries groups. The sales and inventories previously shown in Trading Outlets are now included in the relevant manufacturing industries and industrial groups.

(3) Part of the change in shipments and finished products inventory values from December, 1961 to January, 1962 is the result of the change in the method of reporting by some of the establishments in the Rubber Industries following the revision in the definition of a manufacturing establishment. Sales and inventories previously shown in Trading Outlets under Rubber Industries are now included in manufacturing since the redefinition of the manufacturing establishment has eliminated most of the manufacturers' trading outlets in this industry.

TABLE 3. - (1) See footnote (1), table 2.

(2) The value of Unfilled Orders and therefore, of New Orders for industries in S.I.C. groups - 1, 2, 3, 7, 8, 12, 14, 15, 16 and 17 is small, and sample coverage is not adequate to provide separate estimates for them.

(3) See footnote (2), table 2.

(4) The value of inventory held but not owned in this group is very small, and sample coverage is not adequate to provide separate data. Estimates for this type of inventory are included with Total Inventory Held; for all practical purposes this can be considered the equivalent of Inventory Owned.

(5) See footnote (3), table 2.

TABLE 4. - (1) See footnote (2), table 2.

(2) This grouping does not include the consumer portion of Motor Vehicles, nor of Heating and Cooking Apparatus; it does include the electronic equipment portion of Radios and Parts, (Telecommunication Equipment), and the office and store portion of Furniture. The bulk of Inventory Held but not Owned in this group is applicable to the electronic equipment portion of Radios and Parts.

(3) This grouping does not include trucks and buses.

(4) This group comprises only the 6 industries which cannot be fitted into any of the other groups because of the high proportion of total production exported. Shipments are not to be taken as total exports.

(5) See footnote (3), table 2.

TABLE 6. - (1) Ratios for this group were calculated using values of Total Inventory Held instead of values of Total Inventory Owned. See footnote (4), table 3.

TABLE 7. - (1) Includes sales and inventories of purchased goods for the Petroleum Refining Industry.

(2) See footnote (2), table 2.

(3) This grouping includes industries from the Textile group, the Clothing group, the Transportation Equipment group, the Non-Ferrous Metal Products group, the Non-Metallic Mineral Products group, and the Miscellaneous Industries group. The Leather Products group and the Printing, Publishing and Allied Industries group are not included since no firms in these industries reported Trading Outlets. The Tobacco Products group is not included because Trading Outlet values cannot be separated from plant values.

# ESTIMATED VALUES OF SHIPMENTS, INVENTORY OWNED, AND ORDERS IN ALL MANUFACTURING INDUSTRIES

### TREND SUMMARY

**SHIPMENTS:** Manufacturers' shipments in May were valued at an estimated \$2,210.6 million, up 7.8 per cent from the revised April value of \$2,050.2 million and up just slightly less, 7.3 per cent, from the May 1961 value of \$2,060.3 million. Shipments in May 1961 exceeded, on a month to month comparison, shipments in the previous year for the first time and continued to do so for the remainder of the year. The increase over the previous year on a month to month comparison has continued for the first five months of this year. Using the seasonally adjusted shipment series, however, the value of shipments, altho' slightly higher in April 1961 than in April 1960 did not reach the higher level until June of last year. In 1962 shipments seasonally adjusted have been higher each month than in the corresponding month last year but the increase was only fractionally higher in April than in March and moved down in May. In value terms seasonally adjusted shipments were almost stable in the first quarter of 1962, rose by nearly 3 per cent in April and declined in May to the lowest level in seven months; the increases shown, that is, in both March and May of this year, have been less than would have been expected according to the seasonal pattern of manufacturers' shipments.

**INVENTORIES:** Inventories owned by manufacturers at the end of May amounted in value to \$4,523.9 million down 0.3 per cent from the revised April value of \$4,535.7 million and up 4.9 per cent from the May 1961 value of \$4,312.7 million. Inventories held by manufacturers at the end of May were valued at \$4,782.1 million, down fractionally from the revised April value of \$4,787.9 million and up .7 per cent from the May 1961 value of \$4,523.8 million.

The ratio of inventory owned to shipments was 2.05 in May, 2.21 in April and 2.09 in May 1961. The ratio of finished products to shipments was 0.68 in May, 0.75 in April and 0.70 in May 1961.

The very slight changes in inventory values in May as compared with the two previous months appears to mark the end of the period of inventory accumulation which began in mid 1961 and continued through the first three months of the year. Upward changes in all S.I.C. groups were minor with only three showing increases of more than 2 per cent, a \$1.5 million increase in leather products, a \$4.3 million increase in clothing and a \$6.5 million increase in transportation equipment. These increases were more than balanced by the 3.5 per cent drop in chemical products inventories of \$9.9 million; the equal in value terms in the food industries was of approximately the same amount, \$9.2 million, altho' this is just over 1 per cent in this industry; these two and other minor declines result in the net decline of \$11.7 million in total inventory owned, a negligible amount in terms of the total value of stocks of \$4,523.9 million.

The estimates of inventory held by manufacturers show little difference in the proportions held in raw materials, goods in process and finished goods since the changes were not large in any one component. The total increase in raw materials and goods in process was approximately two thirds of the amount of the decline in finished goods inventory. Half of the increase in goods in process inventory as inventory held under progress payments arrangements. Almost half of the decline in finished goods inventory took place in the processed food industries where the seasonal movement of the previous year's pack to market took place.

**ORDERS:** New orders received in May were valued at \$2,202.1 million, up 8.7 per cent from the revised April value of \$2,025.8 million and up 7.2 per cent from the May 1961 value of \$2,053.6 million.

Unfilled orders in May were valued at \$2,109.0 million, down 0.4 per cent from the revised April value of \$2,117.5 million and up 8.1 per cent from the May 1961 value of \$1,950.5 million.

The unfilled orders balance reached its low point last year in October - and began to move ward in November, a month earlier than in 1960, and at a sharper rate than that year. The declines in April and May have been slight and in fact on a seasonally adjusted basis the decline in April is negligible and May shows a slight rise.

TRADING OUTLETS: Sales through manufacturers' trading outlets in May were valued at \$225.3 million, 3.6 per cent up from the revised April value of \$217.5 million and down 5.5 per cent from the May 1961 value of \$238.5 million.

Inventories held at trading outlets in May were valued at \$267.4 million, 2.5 per cent up from the revised April estimate of \$261.0 million but 6.3 per cent down from the May 1961 value of \$285.0 million.

(1) Includes Pig Iron, Steel Ingots and Castings, Rolled Iron and Steel Products and Ferro-Alloys. (2) The value of inventory held but not owned in this industry is very small, and sample coverage is not adequate to provide separate data. Estimates of this type of inventory are included with total inventory held; for all practical purposes this can be considered the equivalent of inventory owned as well.

# INDUSTRIAL GROUPINGS

The industries shown in the Standard Industrial Classification Groups and the Economic Use Groups are listed below.

A single asterisk (\*) preceding the individual industry title indicates that the industry is shown separately in Table 5 - Statistics for Selected Individual Industries.

A double asterisk (\*\*) preceding the individual industry title indicates that the industry is shown in Table 5 combined with one or more other industries. The industries grouped are listed in footnotes to the table.

The bracketed letters following the individual industry titles indicate the statistical series - shipments, inventories and orders-in which the industry is included monthly: (s) means the industry is included in the shipments series; (i) in the inventory series; and (o) in the orders series. Industries for which monthly coverage is not indicated are included in the all-industry and group totals estimates as described in the October 1961 report, page 82.

### CONCEPTS

Shipments - (Tables 1 to 5) - represent an estimated projection, on a monthly basis, of the latest available Census of industry values.

New Orders - (Tables 2 to 5) - This series is designed to indicate the rate at which new business is being received. It is defined as all New Orders Received during the period, at estimated selling values. Thus it covers total new orders, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month and, therefore, will also be reported as shipments in the month received) or whether they will be added to existing backlogs.

Unfilled Orders - (Tables 2 to 5) - are defined at estimated selling value, at the end of the period stated, of orders received but not yet shipped (or treated as a sale), irrespective of work done on them or of stocks from which they can be filled.

Total Inventory Owned - (Tables 2 to 5) - represents the estimated book value of inventory owned by manufacturers in connection with manufacturing operations, whether held at plant or not, at the end of the period stated. It is made up of: raw materials, goods in process, finished goods of own manufacture at plant and warehouse, less value of inventory held but not owned which cannot be assigned to specific components. Since the series relates to manufacturing inventory only, value of goods purchased for re-sale is not included.

Inventory Held but Not Owned - (Tables 2 to 5) - represents, as far as possible, the portion of manufacturers' total inventory holdings which are no longer owned by the reporting manufacturers because of payments made on long-term contracts as work on these progresses. This item is applicable only to the relatively few industries where long-term contracts are common although, because of the nature of the item, the value per industry is high.

Because of variations in accounting methods there are a few cases where it is not possible to obtain values for this type of inventory. The estimated value shown for this item must therefore be considered to some extent incomplete.

Total Inventory Held - (Tables 2 to 5) - represents the estimated total value of manufacturers' inventory holdings in connection with manufacturing operations, regardless of ownership; it differs from inventory owned by the inclusion of amounts held under progress payments arrangements.

Inventory Components - (Tables 2 to 5) - (Raw Materials, Goods in Process, and Finished Products) are reported and compiled as on the books of each manufacturer, i.e. there has been no attempt to define the components specifically for each industry.

The inventory components are always a breakdown of total inventory held, not of total inventory owned. In industries where these two items differ, due to the inclusion of inventory held but not owned (see above), it is not possible to obtain value of inventory owned by components since, where separate progress accounts are maintained, firms concerned can only state that, of total holdings, a certain amount is no longer owned by them. It is fairly obvious that the bulk of such payments apply to goods in process holdings but due to time lags in shipments and to prepayments some of the total value of inventory held but not owned would be applicable to finished products or raw materials.

Any comparisons of shipments/inventory ratios should be made using total inventory owned, not total inventory held, since the latter includes values which have already been written off to sales. If shipments inventory ratios are desired using inventory components, rather than total inventory, a reasonable approximation to total inventory owned by components could be obtained by assuming that all inventory held but not owned had been included with goods in process.

Trading Outlets - (Table 7) - are defined as any establishments (other than retail stores) operated by manufacturers, apart from their plants or plant-warehouses, which carry stocks and make sales direct to customers. Sales offices which merely arrange sales but do not carry stock, or which carry small quantities only for demonstration purposes, are not included. Sales for this series represent direct sales from the outlet of goods manufactured by the owning or associated manufacturing company, with sales arranged by outlets but shipped direct from plant excluded wherever possible; goods purchased for re-sale from sources other than the owning or associated manufacturing company are also excluded except for the Petroleum Products industry group where a separation of purchased products is not feasible. Inventories for this series represents owned inventories held at Trading Outlets or in warehouses serving the trading outlets; again, goods purchased for re-sale are excluded except for the Petroleum Products industry.

Industries and Groupings - All individual industries (Table 5) and the Standard Industrial Classification groupings of industries used in Tables 3, 6 and 7, are defined according to the Standard Industrial Classification Manual. A list of the industries included in the Standard Industrial Classification groups and in the Economic-Use groupings of industries (Tables 3, 6 and 7) will be found on page 53 of the bulletin.

### SOURCES

Monthly (or, in a few cases, quarterly) reports covering value of inventories and shipments are now submitted on a voluntary basis by 3,000 plants in 120 industries; in addition, 3,000 small plants in 100 of these industries report monthly shipments only. Of the first group, 1,025 plants in 83 industries also report new and unfilled orders. Four industries are included in the total shipments estimates by using data available from other Bureau series, and two of these are also included in the total inventory estimates.

FOOTNOTES TO TABLES

TABLE 1. - (1) Prince Edward Island and Nova Scotia combined for monthly estimates.

(2) Yukon and the Northwest Territories combined with British Columbia.

TABLE 2. - (1) Annual shipments values differ slightly from published Census of Industry totals due to inventory adjustments for certain industries where Census of Industry data represent production rather than shipments values.

(2) Part of the change in values from December 1958 to January 1959, is the result of the discontinuing of Trading Outlet operations for goods of own manufacture by some of the establishments reporting in the Electrical Apparatus Industries groups. The sales and inventories previously shown in Trading Outlets are now included in the relevant manufacturing industries and industrial groups.

(3) Part of the change in shipments and finished products inventory values from December, 1961 to January, 1962 is the result of the change in the method of reporting by some of the establishments in the Rubber Industries following the revision in the definition of a manufacturing establishment. Sales and inventories previously shown in Trading Outlets under Rubber Industries are now included in manufacturing since the redefinition of the manufacturing establishment has eliminated most of the manufacturers' trading outlets in this industry.

TABLE 3. - (1) See footnote (1), table 2.

(2) The value of Unfilled Orders and therefore, of New Orders for industries in S.I.C. groups - 1, 2, 3, 7, 8, 12, 14, 15, 16 and 17 is small, and sample coverage is not adequate to provide separate estimates for them.

(3) See footnote (2), table 2.

(4) The value of inventory held but not owned in this group is very small, and sample coverage is not adequate to provide separate data. Estimates for this type of inventory are included with Total Inventory Held; for all practical purposes this can be considered the equivalent of Inventory Owned.

(5) See footnote (3), table 2.

TABLE 4. - (1) See footnote (2), table 2.

(2) This grouping does not include the consumer portion of Motor Vehicles, nor of Heating and Cooking Apparatus; it does include the electronic equipment portion of Radios and Parts, (Telecommunication Equipment), and the office and store portion of Furniture. The bulk of Inventory Held but not Owned in this group is applicable to the electronic equipment portion of Radios and Parts.

(3) This grouping does not include trucks and buses.

(4) This group comprises only the 6 industries which cannot be fitted into any of the other groups because of the high proportion of total production exported. Shipments are not to be taken as total exports.

(5) See footnote (3), table 2.

TABLE 6. - (1) Ratios for this group were calculated using values of Total Inventory Held instead of values of Total Inventory Owned. See footnote (4), table 3.

TABLE 7. - (1) Includes sales and inventories of purchased goods for the Petroleum Refining Industry.

(2) See footnote (2), table 2.

(3) This grouping includes industries from the Textile group, the Clothing group, the Transportation Equipment group, the Non-Ferrous Metal Products group, the Non-Metallic Mineral Products group, and the Miscellaneous Industries group. The Leather Products group and the Printing, Publishing and Allied Industries group are not included since no firms in these industries reported Trading Outlets. The Tobacco Products group is not included because Trading Outlet values cannot be separated from plant values.

# ESTIMATED VALUES OF SHIPMENTS, INVENTORY OWNED, AND ORDERS IN ALL MANUFACTURING INDUSTRIES

### TREND SUMMARY

**SHIPMENTS:** Manufacturers' shipments in June were valued at \$2,271.4 million which is 1.2 per cent less than shipments in May of \$2,298.3 million. This value adjusted for seasonal variation also registered a decline of 2.2 per cent from the May value.

This is not the first month this year to show a decline from the previous month as, in fact, every alternative month this year has been below the proceeding one, nor does the decline appear significant when the series is smoothed by the simple use of a three month moving average. This adjustment has some comparative interest in that it shows up the low point of the year from 1959 to the present in the three months ending in February each year with a peak in the three months period ending in June. The rise from trough to peak was higher this year, approximately 16 per cent, than in either 1961, 14 per cent, or 1960, 10 per cent but very comparable with the 1959 rise of 17 per cent. In both 1959 and 1960 this peak was followed immediately by a decline in the summer months whereas in 1961 only a very slight decline was shown and that not until the end of the summer quarter. A comparatively greater decline in the seasonally adjusted series for June again does not yet appear significant in the trend which has been a steadily upward one since June 1961. The rate of increase has been slackening it is true but it would be difficult to point to the June decline as the beginning of a downward trend in view of the level of shipments in the second quarter as a whole.

Looking at the durable and non-durable manufacturing industries separately the upward movement of the non-durable goods group is somewhat obscured by the strong seasonal movement in this group which is less characteristic of the durable goods group as a whole. The upward movement in the latter has been strong for the past year. Separating three durable goods groups, durable consumer goods, capital goods and the construction industries and looking at shipments in these groups in the seasonally adjusted series there is a considerable similarity in the pattern of shipments in the construction industry and the durable consumer goods industries which differs from the movement of shipments in the capital goods industries. In the former, the decline in 1959 and early 1960 was followed by fairly sizeable shipments from the summer of 1960 to the summer of 1961 with a strongly upward trend this past year. The capital goods industries however continue to decline until mid 1961 and altho' shipments rose sharply and were high in the fall of 1961 and at the year's end it is too soon to tell whether the increases in May and June have reversed the decline which began this year in January.

**INVENTORIES:** The level of inventories owned in manufacturing was down slightly at the end of June, 0.5 per cent, from the previous month and was valued at \$4,482.9 million. Inventory held declined slightly less, by 0.4 per cent since inventory held under progress payments arrangements increased by 0.3 per cent during June.

Altho' the changes in levels of inventory in total were really too small to be used for anything but the broadest indication of business conditions it should perhaps be pointed out that the largest change in the month was the decline in finished goods inventories. Since the ratio of finished products to shipments rose from 0.65 in May to 0.66 and since shipments in June were lower than in the previous month it may indicate some degree of slackening in manufacturing activity. On the other hand goods in process inventory was slightly higher which to some degree points to increased activity. The decline in raw materials activity can result equally well from an increase in manufacturing activity, a decline in purchases or simply a slow up in deliveries.

The changes from the end of June 1961 would indicate considerably increased activity this year as compared with last as goods in process inventory was 12 per cent higher and raw materials were up 4.3 per cent. Finished goods inventories were only 3.4 per cent higher and in relation to shipments, (shipments-inventory ratio) were lower than the year before at 0.66 compared to 0.68.

ORDERS: New orders received in June were valued at \$2,259.0 million, 1.3 per cent below the revised May total of \$2,288.0 million but 6.9 per cent above the June 1961 value of \$2,113.3 million. Unfilled orders at the end of June were estimated at \$2,094.8 million, down 0.6 per cent from the revised May value of \$2,107.2 million but up 8.3 per cent from last year's June level of \$1,934.5 million.

Unfilled orders have shown a slow but steady decline since March following a rise through the fourth quarter of 1961 and the first quarter of this year. The downward movement is more pronounced than the decline in the second quarter of last year but it also follows a sharper upward movement.

The decline in unfilled orders in June is concentrated in the transportation industries, both in the heavy transportation and the automotive industries. This is not, however, to imply that there is any similarity in the unfilled orders in these two industry groups as the level of unfilled orders in the automotive industries is higher this year than last whereas in the heavy transportation industries the level of unfilled orders has fallen steadily since 1959. Although the level of unfilled orders in the heavy transportation industries is 8 per cent below the level at the end of June 1961 has remained fairly stable at this level during the past year.

Unfilled orders in the construction industries and in the export industries are higher, substantially so in construction goods, than they were a year ago and the decline in June as compared with May is insignificant.

TRADING OUTLETS: Sales through manufacturers' trading outlets in June were valued at \$240.0 million, 2.6 per cent down from the revised May value of \$246.4 million and up 1.8 per cent from the June 1961 value of \$235.7 million.

Inventories held at trading outlets in June were valued at \$279.2 million, 3.1 per cent up from the revised May estimate of \$270.8 million but 7.3 per cent down from the June 1961 value of \$301.2 million.

(1) Includes Pig Iron, Steel Ingots and Castings, Rolled Iron and Steel Products and Ferro-Alloys. (2) The value of Inventory held but not owned in this industry is very small, and sample coverage is not adequate to provide separate data. Estimates of this type of inventory are included with total inventory held; for all practical purposes this can be considered the equivalent of inventory owned as well.

# INDUSTRIAL GROUPINGS

The industries shown in the Standard Industrial Classification Groups and the Economic Use Groups are listed below.

A single asterisk (\*) preceding the individual industry title indicates that the industry is shown separately in Table 5 - Statistics for Selected Individual Industries.

A double asterisk (\*\*) preceding the individual industry title indicates that the industry is shown in Table 5 combined with one or more other industries. The industries grouped are listed in footnotes to the table.

The bracketed letters following the individual industry titles indicate the statistical series - shipments, inventories and orders-in which the industry is included monthly: (s) means the industry is included in the shipments series; (i) in the inventory series; and (o) in the orders series. Industries for which monthly coverage is not indicated are included in the all-industry and group totals estimates as described in the October 1961 report, page 82.

## CONCEPTS AND SOURCES

For further detail, and for description of methods used, see October, 1961 report, page 82.

### CONCEPTS

Shipments - (Tables 1 to 5) - represent an estimated projection, on a monthly basis, of the latest available Census of Industry values.

New Orders - (Tables 2 to 5) - This series is designed to indicate the rate at which new business is being received. It is defined as all New Orders Received during the period, at estimated selling values. Thus it covers total new orders, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month (and, therefore, will also be reported as shipments in the month received) or whether they will be added to existing backlogs.

Unfilled Orders - (Tables 2 to 5) - are defined at estimated selling value, at the end of the period stated, of orders received but not yet shipped (or treated as a sale), irrespective of work done on them or of stocks from which they can be filled.

Total Inventory Owned - (Tables 2 to 5) - represents the estimated book value of inventory owned by manufacturers in connection with manufacturing operations, whether held at plant or not, at the end of the period stated. It is made up of: raw materials, goods in process, finished goods of own manufacture at plant or warehouse, less value of inventory held but not owned which cannot be assigned to specific components. Since the series relates to manufacturing inventory only, value of goods purchased for re-sale is not included.

Inventory Held but Not Owned - (Tables 2 to 5) - represents, as far as possible, the portion of manufacturers' total inventory holdings which are no longer owned by the reporting manufacturers because of payments made on long-term contracts as work on these progresses. This item is applicable only to the relatively few industries where long-term contracts are common although, because of the nature of the item, the value per industry is high.

Because of variations in accounting methods there are a few cases where it is not possible to obtain values for this type of inventory. The estimated value shown for this item must therefore be considered to some extent incomplete.

Total Inventory Held - (Tables 2 to 5) - represents the estimated total value of manufacturers' inventory holdings in connection with manufacturing operations, regardless of ownership; it differs from inventory owned by the inclusion of amounts held under progress payments arrangements.

Inventory Components - (Tables 2 to 5) - (Raw Materials, Goods in Process, and Finished Products) are reported and compiled on the books of each manufacturer, i.e. there has been no attempt to define the components specifically for each industry.

The inventory components are always a breakdown of total inventory held, not of total inventory owned. In industries where these two items differ, due to the inclusion of inventory held but not owned (see above), it is not possible to obtain value of inventory owned by components since, where separate progress accounts are maintained, firms concerned can only state that, of total holdings, a certain amount is no longer owned by them. It is fairly obvious that the bulk of such payments apply to goods in process holdings but due to time lags in shipments and to prepayments some of the total value of inventory held but not owned would be applicable to finished products or raw materials.

Any comparisons of shipments/inventory ratios should be made using total inventory owned, not total inventory held, since the latter includes values which have already been written off to sales. If shipments/inventory ratios are desired using inventory components, rather than total inventory, a reasonable approximation to total inventory owned by components would be obtained by assuming that all inventory held but not owned had been included with goods in process.

Trading Outlets - (Table 7) - are defined as any establishments (other than retail stores) operated by manufacturers, apart from their plants or plant-warehouses, which carry stocks and make sales direct to customers. Sales offices which merely arrange sales but do not carry stock, or which carry small quantities only for demonstration purposes, are not included. Sales for this series represent direct sales from the outlet of goods manufactured by the owning or associated manufacturing company, with sales arranged by outlets but shipped direct from plant excluded wherever possible; goods purchased for re-sale from sources other than the owning or associated manufacturing company are also excluded except for the Petroleum Products industry group where a separation of purchased products is not feasible. Inventories for this series represents owned inventories held at Trading Outlets or in warehouses serving the trading outlets; again, goods purchased for re-sale are excluded except for the Petroleum Products industry.

Industries and Groupings - All individual industries (Table 5) and the Standard Industrial Classification groupings of industries used in Tables 3, 6 and 7, are defined according to the Standard Industrial Classification Manual. A list of the industries included in the Standard Industrial Classification groups and in the Economic-Use groupings of industries (Tables 4 and 6) will be found on page 53 of the bulletin.

### SOURCES

Monthly (or, in a few cases, quarterly) reports covering value of inventories and shipments are now submitted on a voluntary basis by 3,000 plants in 120 industries; in addition, 3,000 small plants in 100 of these industries report monthly shipments only. Of the first group, 1,025 plants in 83 industries also report new and unfilled orders. Four industries are included in the total shipments estimates by using data available from other Bureau series, and two of these are also included in the total inventory estimates.

FOOTNOTES TO TABLES

TABLE 1. - (1) Prince Edward Island and Nova Scotia combined for monthly estimates.

(2) Yukon and the Northwest Territories combined with British Columbia.

TABLE 2. - (1) Annual shipments values differ slightly from published Census of Industry totals due to inventory adjustments for certain industries where Census of Industry data represent production rather than shipments values.

(2) Part of the change in values from December 1958 to January 1959, is the result of the discontinuing of Trading Outlet operations for goods of own manufacture by some of the establishments reporting in the Electrical Apparatus Industries groups. The sales and inventories previously shown in Trading Outlets are now included in the relevant manufacturing industries and industrial groups.

(3) Part of the change in shipments and finished products inventory values from December, 1961 to January, 1962 is the result of the change in the method of reporting by some of the establishments in the Rubber Industries following the revision in the definition of a manufacturing establishment. Sales and inventories previously shown in Trading Outlets under Rubber Industries are now included in manufacturing since the redefinition of the manufacturing establishment has eliminated most of the manufacturers' trading outlets in this industry.

TABLE 3. - (1) See footnote (1), table 2.

(2) The value of Unfilled Orders and therefore, of New Orders for industries in S.I.C. groups - 1, 2, 3, 7, 8, 12, 14, 15, 16 and 17 is small, and sample coverage is not adequate to provide separate estimates for them.

(3) See footnote (2), table 2.

(4) The value of inventory held but not owned in this group is very small, and sample coverage is not adequate to provide separate data. Estimates for this type of inventory are included with Total Inventory Held; for all practical purposes this can be considered the equivalent of Inventory Owned.

(5) See footnote (3), table 2.

TABLE 4. - (1) See footnote (2), table 2.

(2) This grouping does not include the consumer portion of Motor Vehicles, nor of Heating and Cooking Apparatus; it does include the electronic equipment portion of Radios and Parts, (Telecommunication Equipment), and the office and store portion of Furniture. The bulk of Inventory Held but not Owned in this group is applicable to the electronic equipment portion of Radios and Parts.

(3) This grouping does not include trucks and buses.

(4) This group comprises only the 6 industries which cannot be fitted into any of the other groups because of the high proportion of total production exported. Shipments are not to be taken as total exports.

(5) See footnote (3), table 2.

TABLE 6. - (1) Ratios for this group were calculated using values of Total Inventory Held instead of values of Total Inventory Owned. See footnote (4), table 3.

TABLE 7. - (1) Includes sales and inventories of purchased goods for the Petroleum Refining Industry.

(2) See footnote (2), table 2.

(3) This grouping includes industries from the Textile group, the Clothing group, the Transportation Equipment group, the Non-Ferrous Metal Products group, the Non-Metallic Mineral Products group, and the Miscellaneous Industries group. The Leather Products group and the Printing, Publishing and Allied Industries group are not included since no firms in these industries reported Trading Outlets. The Tobacco Products group is not included because Trading Outlet values cannot be separated from plant values.

(4) See footnote (3), table 2.

# ESTIMATED VALUES OF SHIPMENTS, INVENTORY OWNED, AND ORDERS IN ALL MANUFACTURING INDUSTRIES

### TREND SUMMARY

Manufacturers' shipments in July were valued at an estimated \$2,174.4 million which is 5.3 per cent lower than the revised June estimate of \$2,295.7 million but 11.4 per cent higher than July shipments a year ago which are estimated at \$1,952.4 million.

The decline in shipments in July is seasonal and is less than usual since the seasonally adjusted value, at \$2,247.0 million, is 4.3 per cent higher than the revised June estimate of \$2,154.2 million; it is also 10.9 per cent higher than the estimated value of shipments in July last year of \$2,027.0 million and is in fact at the highest level yet reached.

The durable goods industries, led by the automotive group, showed a sharper decline this month than the non-durable group. The decline in automobile shipments this summer has been less than usual however and total shipments in the first seven months have been the highest on record running \$200 million above shipments in the comparable periods in 1960 and 1956.

Shipments in the construction goods industries moved up to peak levels in May and June this year and although July shipments dropped about 3 per cent from June the value of shipments for the first seven months is nearly 12 per cent higher than shipments in the same period last year. The previous peak year in these industries was in 1959 and shipments this year are running 5 per cent higher than in that year.

In the non-durable goods industries the decline in July of 2.7 per cent following the slight per cent decline in June as compared with May, still leaves the shipments in these industries for the first seven months in 1962 6.7 per cent above the comparable period in 1961.

None of the non-durable industry groups showed any unusual changes in July except perhaps the clothing industries where shipments were up by 11 per cent as compared with June. Shipments in the food industries, which make up a third of total non-durable goods, were at the same level in July as in June.

The slight increase in unfilled orders on books at the end of July is not in itself sufficient to indicate an expansion in manufacturing activity but together with the upward revision in the level at the end of June it does bring the level of unfilled orders up to the level which prevailed in 1959. If the unfilled orders in the transportation equipment industries, S.I.C. 11, are considered separately and excluded from the total, unfilled orders in manufacturing show a steady increase from the middle of 1961 reaching a level this summer comparable with that at the beginning of 1958. Unfilled orders in S.I.C. 11 have dropped to half the level they were at the beginning of 1958, reflecting the drop in unfilled orders for aircraft and ships.

Inventories owned by manufacturers at the end of July were estimated at \$4,463.9 million a decrease of 0.3 per cent from the revised June total of \$4,478.0 million; inventories held by manufacturers were fractionally higher at the end of July, \$4,755.4 million as compared with inventories held at the end of June of \$4,754.3 million. The difference indicates an increase in inventory held under express payments arrangements which amounted to \$15 million.

Although the shift in the components of inventory held during July is insignificant compared with the end of June the shift over the year is interesting. Finished products inventory is up by over 5 per cent and raw materials inventory by nearly 4 per cent with goods in process up by 15 per cent. Inventory held under progress payments undoubtedly contributes heavily to this increase in goods in process as inventory held under progress payments is over 40 per cent higher at the end of July this year as compared with last.

The increase in finished goods inventory is less than the increase in shipments as compared with July a year ago as the ratio of finished products inventory to shipments is lower, at 0.68, than it was last year at 0.71. As compared with June, however, both finished goods and total inventory ratios to shipments have moved up.

Although all the industry groups with the exception of S.I.C. groups 8, paper products and 14, non-metallic mineral products show increases in inventory holdings this month as compared with a year ago, five groups have quite substantial increases. These are the rubber, leather and textile products industries, the electrical apparatus and supplies industries and the petroleum and petroleum products industries. There are fairly wide differences between the shipments and inventory patterns in these groups but it would appear as if the rubber, textile products and electrical apparatus and supplies industries are operating at a significantly higher level: shipments are up substantially, unfilled orders in the textile products and the electrical apparatus industries are much higher and inventories are higher in all three components in each group. The inventory shipments ratios are lower in July for both total inventory and finished goods inventory for textiles and electrical apparatus although higher for total inventory in the rubber products industries.

Inventories in the leather products group are higher, up 7 per cent this July as compared with a year ago, and have been running at a higher level all year too but the inventories shipments ratio has gone up since shipments have been running 6 per cent above last year.

Inventories in the electrical apparatus and supplies group are up and substantially, 12.5 per cent, in total but within this rise there has also been a considerable shift in components. Goods in process inventories now account for approximately 40 per cent of inventory holdings, an upward shift of about 5 per cent during the past four years. During the same period, inventory held under progress payments has dropped to about a third of what it was in 1958.

(1) Includes Pig Iron, Steel Ingots and Castings, Rolled Iron and Steel Products and Ferro-Alloys. (2) The value of inventory held but not owned in this industry is very small, and sample coverage is not adequate to provide separate data. Estimates of this type of inventory are included with total inventory held; for all practical purposes this can be considered the equivalent of inventory owned as well.

# INDUSTRIAL GROUPINGS

The industries shown in the Standard Industrial Classification Groups and the Economic Use Groups are listed below.

A single asterisk (\*) preceding the individual industry title indicates that the industry is shown separately in Table 5 - Statistics for Selected Individual Industries.

A double asterisk (\*\*) preceding the individual industry title indicates that the industry is shown in Table 5 combined with one or more other industries. The industries grouped are listed in footnotes to the table.

The bracketed letters following the individual industry titles indicate the statistical series - shipments, inventories and orders-in which the industry is included monthly: (s) means the industry is included in the shipments series; (i) in the inventory series; and (o) in the orders series. Industries for which monthly coverage is not indicated are included in the all-industry and group totals estimates as described in the October 1961 report, page 82.

## CONCEPTS AND SOURCES

For further detail, and for description of methods used, see October, 1961 report, page 82.

### CONCEPTS

Shipments - (Tables 1 to 5) - represent an estimated projection, on a monthly basis, of the latest available Census of Industry values.

New Orders - (Tables 2 to 5) - This series is designed to indicate the rate at which new business is being received. It is defined as all New Orders Received during the period, at estimated selling values. Thus it covers total new orders, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month (and, therefore, will also be reported as shipments in the month received) or whether they will be added to existing backlogs.

Unfilled Orders - (Tables 2 to 5) - are defined at estimated selling value, at the end of the period stated, of orders received but not yet shipped (or treated as a sale), irrespective of work done on them or of stocks from which they can be filled.

Total Inventory Owned - (Tables 2 to 5) - represents the estimated book value of inventory owned by manufacturers in connection with manufacturing operations, whether held at plant or not, at the end of the period stated. It is made up of: raw materials, goods in process, finished goods of own manufacture at plant and warehouse, less value of inventory held but not owned which cannot be assigned to specific components. Since the series relates to manufacturing inventory only, value of goods purchased for re-sale is not included.

Inventory Held but Not Owned - (Tables 2 to 5) - represents, as far as possible, the portion of manufacturers' total inventory holdings which are no longer owned by the reporting manufacturers because of payments made on long-term contracts as work on these progresses. This item is applicable only to the relatively few industries where long-term contracts are common although, because of the nature of the item, the value per industry is high.

Because of variations in accounting methods there are a few cases where it is not possible to obtain values for this type of inventory. The estimated value shown for this item must therefore be considered to some extent incomplete.

Total Inventory Held - (Tables 2 to 5) - represents the estimated total value of manufacturers' inventory holdings in connection with manufacturing operations, regardless of ownership; it differs from inventory owned by the inclusion of amounts held under progress payments arrangements.

Inventory Components - (Tables 2 to 5) - (Raw Materials, Goods in Process, and Finished Products) are reported and compiled as on the books of each manufacturer, i.e. there has been no attempt to define the components specifically for each industry.

The inventory components are always a breakdown of total inventory held, not of total inventory owned. In industries where these two items differ, due to the inclusion of inventory held but not owned (see above), it is not possible to obtain value of inventory owned by components since, where separate progress accounts are maintained, firms concerned can only state that, of total holdings, a certain amount is no longer owned by them. It is fairly obvious that the bulk of such payments apply to goods in process holdings but due to time lags in shipments and to prepayments some of the total value of inventory held but not owned would be applicable to finished products or raw materials.

Any comparisons of shipments/inventory ratios should be made using total inventory owned, not total inventory held, since the latter includes values which have already been written off to sales. If shipments/inventory ratios are desired using inventory components, rather than total inventory, a reasonable approximation to total inventory owned by components would be obtained by assuming that all inventory held but not owned had been included with goods in process.

Trading Outlets - (Table 7) - are defined as any establishments (other than retail stores) operated by manufacturers, apart from their plants or plant-warehouses, which carry stocks and make sales direct to customers. Sales offices which merely arrange sales but do not carry stock, or which carry small quantities only for demonstration purposes, are not included. Sales for this series represent direct sales from the outlet of goods manufactured by the owning or associated manufacturing company, with sales arranged by outlets but shipped direct from plant excluded wherever possible; goods purchased for re-sale from sources other than the owning or associated manufacturing company are also excluded except for the Petroleum Products industry group where a separation of purchased products is not feasible. Inventories for this series represents owned inventories held at Trading Outlets or in warehouses serving the trading outlets; again, goods purchased for re-sale are excluded except for the Petroleum Products industry.

Industries and Groupings - All individual industries (Table 5) and the Standard Industrial Classification groupings of industries used in Tables 3, 6 and 7, are defined according to the Standard Industrial Classification Manual. A list of the industries included in the Standard Industrial Classification groups and in the Economic-Use groupings of industries (Tables 4, and 6) will be found on page 53 of the bulletin.

### SOURCES

Monthly (or, in a few cases, quarterly) reports covering value of inventories and shipments are now submitted on a voluntary basis by 3,000 plants in 120 industries; in addition, 3,000 small plants in 100 of these industries report monthly shipments only. Of the first group, 1,025 plants in 83 industries also report new and unfilled orders. Four industries are included in the total shipments estimates by using data available from other Bureau series, and two of these are also included in the total inventory estimates.

FOOTNOTES TO TABLES

TABLE 1. - (1) Prince Edward Island and Nova Scotia combined for monthly estimates.  
(2) Yukon and the Northwest Territories combined with British Columbia.

TABLE 2. - (1) Annual shipments values differ slightly from published Census of Industry totals due to inventory adjustments for certain industries where Census of Industry data represent production rather than shipments values.

(2) Part of the change in values from December 1958 to January 1959, is the result of the discontinuing of Trading Outlet operations for goods of own manufacture by some of the establishments reporting in the Electrical Apparatus Industries groups. The sales and inventories previously shown in Trading Outlets are now included in the relevant manufacturing industries and industrial groups.

(3) Part of the change in shipments and finished products inventory values from December, 1961 to January, 1962 is the result of the change in the method of reporting by some of the establishments in the Rubber Industries following the revision in the definition of a manufacturing establishment. Sales and inventories previously shown in Trading Outlets under Rubber Industries are now included in manufacturing since the redefinition of the manufacturing establishment has eliminated most of the manufacturers' trading outlets in this industry.

TABLE 3. - (1) See footnote (1), table 2.

(2) The value of Unfilled Orders and therefore, of New Orders for industries in S.I.C. groups - 1, 2, 3, 7, 8, 14, 15, 16 and 17 is small, and sample coverage is not adequate to provide separate estimates for them.

(3) See footnote (2), table 2.

(4) The value of inventory held but not owned in this group is very small, and sample coverage is not adequate to provide separate data. Estimates for this type of inventory are included with Total Inventory Held; for all practical purposes this can be considered the equivalent of Inventory Owned.

(5) See footnote (3), table 2.

TABLE 4. - (1) See footnote (2), table 2.

(2) This grouping does not include the consumer portion of Motor Vehicles, nor of Heating and Cooking Apparatus; it does include the electronic equipment portion of Radios and Parts, (Telecommunication Equipment), and the office and store portion of Furniture. The bulk of Inventory Held but not Owned in this group is applicable to the electronic equipment portion of Radios and Parts.

(3) This grouping does not include trucks and buses.

(4) This group comprises only the 6 industries which cannot be fitted into any of the other groups because of the high proportion of total production exported. Shipments are not to be taken as total exports.

(5) See footnote (3), table 2.

TABLE 6. - (1) Ratios for this group were calculated using values of Total Inventory Held instead of values of Total Inventory Owned. See footnote (4), table 3.

TABLE 7. - (1) Includes sales and inventories of purchased goods for the Petroleum Refining Industry.

(2) See footnote (2), table 2.

(3) This grouping includes industries from the Textile group, the Clothing group, the Transportation Equipment group, the Non-Ferrous Metal Products group, the Non-Metallic Mineral Products group, and the Miscellaneous Industries group. The Leather Products group and the Printing, Publishing and Allied Industries group are included since no firms in these industries reported Trading Outlets. The Tobacco Products group is not included because Trading Outlet values cannot be separated from plant values.

(4) See footnote (3), table 2.

# ESTIMATED VALUES OF SHIPMENTS, INVENTORY OWNED, AND ORDERS IN ALL MANUFACTURING INDUSTRIES

TREND SUMMARY

Manufacturers' shipments in August were valued at an estimated \$2,137.2 million, up 0.8% from the revised July total of \$2,119.5 million and up 2.3% from \$2,088.8 million in August 1961. In the seasonally adjusted series the value of shipments in August at \$2,077.6 million was 5.1% lower than the revised July value of \$2,190.3 million and 2.1% higher than the seasonally adjusted estimate of \$2,034.1 million in August 1961.

The slight rise in manufacturers shipments in August marked the first downward movement in the seasonally adjusted series since January of this year. The seasonal increase expected in the textile and clothing industries in August was much less than usual and the seasonal drop in the transportation industries was much larger resulting in the larger than usual seasonal declines. It is perhaps somewhat ironical that the drop in shipments in the motor vehicle industry should show up so sharply in this month as it is becoming apparent that this year will probably be the largest year in the automobile industry's history. However the annual model change almost always shows up initially as a decline in August shipments.

New orders in the motor vehicle industry which reached record proportions in the four months from March to June this year have fallen back again; unfilled orders while never as high this year as in 1959 have been substantially higher this year than last.

Inventories owned by manufacturers at the end of August were valued at \$4,533.7 million, an increase of 1.3% from the revised July estimate of \$4,475.7 million and an increase of 6.0% from the August 1961 estimate of \$4,278.0 million. Inventories held by manufacturers at the end of August, valued at \$4,821.2 million, were up 1.1% from the previous month's estimate of \$4,766.5 million and up 7.6% from \$4,480.6 million a year ago. The ratio of total Inventory-to-shipments was 2.12 in August, 2.11 in July and 2.05 in August 1961. The ratio of finished products-to-shipments was 0.68 in August, 0.69 in July and 0.65 a year earlier.

The increase in inventories in August although not significant is interesting in that the greatest increase is shown in goods in process. (Finished Products inventory actually shows a slight decline although a lower decline than could have been expected as the seasonally adjusted series shows a slight rise). Thus the rise indicates an increase in manufacturing activity rather than an accumulation of manufactured goods although the ratio of finished products inventory to shipments does indicate an increase as compared with a year ago.

New orders received in August were valued at \$2,133.1 million, an increase of 1.1% from the revised July total of \$2,110.9 million and an increase of 2.8% from the August 1961 value of \$2,075.9 million. Unfilled orders at the end of August, at \$2,137.3 million, were down fractionally from the July estimate of \$2,141.4 million but 11.4% higher than the \$1,918.2 million reported in August 1961.

Sales through manufacturers trading outlets, valued at \$242.4 million, were 2.0% higher than the revised July estimate of \$237.7 million and 1.1% lower than the August 1961 value of \$245.0 million. Inventories held at trading outlets valued at \$287.4 million were fractionally higher than the July value of \$286.5 million and 5.5% lower than the \$304.0 million reported in August 1961.

## INDUSTRIAL GROUPINGS

The industries shown in the Standard Industrial Classification Groups and the Economic Use Groups are listed below.

A single asterisk (\*) preceding the individual industry title indicates that the industry is shown separately in Table 5 - Statistics for Selected Individual Industries.

A double asterisk (\*\*) preceding the individual industry title indicates that the industry is shown in Table 5 combined with one or more other industries. The industries grouped are listed in footnotes to the table.

The bracketed letters following the individual industry titles indicate the statistical series - shipments, inventories and orders-in which the industry is included monthly: (s) means the industry is included in the shipments series; (i) in the inventory series; and (o) in the orders series. Industries for which monthly coverage is not indicated are included in the all-industry and group totals estimates as described in the October 1961 report, page 82.

## CONCEPTS AND SOURCES

For further detail, and for description of methods used, see October, 1961 report, page 82.

### CONCEPTS

Shipments - (Tables 1 to 5) - represent an estimated projection, on a monthly basis, of the latest available Census of Industry values.

New Orders - (Tables 2 to 5) - This series is designed to indicate the rate at which new business is being received. It is defined as all New Orders Received during the period, at estimated selling values. Thus it covers total new orders, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month (and, therefore, will also be reported as shipments in the month received) or whether they will be added to existing backlogs.

Unfilled Orders - (Tables 2 to 5) - are defined at estimated selling value, at the end of the period stated, of orders received but not yet shipped (or treated as a sale), irrespective of work done on them or of stocks from which they can be filled.

Total Inventory Owned - (Tables 2 to 5) - represents the estimated book value of inventory owned by manufacturers in connection with manufacturing operations, whether held at plant or not, at the end of the period stated. It is made up of: raw materials, goods in process, finished goods of own manufacture at plant and warehouse, less value of inventory held but not owned which cannot be assigned to specific components. Since the series relates to manufacturing inventory only, value of goods purchased for re-sale is not included.

Inventory Held but Not Owned - (Tables 2 to 5) - represents, as far as possible, the portion of manufacturers' total inventory holdings which are no longer owned by the reporting manufacturers because of payments made on long-term contracts as work on these progresses. This item is applicable only to the relatively few industries where long-term contracts are common although, because of the nature of the item, the value per industry is high.

Because of variations in accounting methods there are a few cases where it is not possible to obtain values for this type of inventory. The estimated value shown for this item must therefore be considered to some extent incomplete.

Total Inventory Held - (Tables 2 to 5) - represents the estimated total value of manufacturers' inventory holdings in connection with manufacturing operations, regardless of ownership; it differs from inventory owned by the inclusion of amounts held under progress payments arrangements.

Inventory Components - (Tables 2 to 5) - (Raw Materials, Goods in Process, and Finished Products) are reported and compiled as on the books of each manufacturer, i.e. there has been no attempt to define the components specifically for each industry.

The inventory components are always a breakdown of total inventory held, not of total inventory owned. In industries where these two items differ, due to the inclusion of inventory held but not owned (see above), it is not possible to obtain value of inventory owned by components since, where separate progress accounts are maintained, firms concerned can only state that, of total holdings, a certain amount is no longer owned by them. It is fairly obvious that the bulk of such payments apply to goods in process holdings but due to time lags in shipments and to prepayments some of the total value of inventory held but not owned would be applicable to finished products or raw materials.

Any comparisons of shipments/inventory ratios should be made using total inventory owned, not total inventory held, since the latter includes values which have already been written off to sales. If shipments inventory ratios are desired using inventory components, rather than total inventory, a reasonable approximation to total inventory owned by components would be obtained by assuming that all inventory held but not owned had been included with goods in process.

Trading Outlets - (Table 7) - are defined as any establishments (other than retail stores) operated by manufacturers, apart from their plants or plant-warehouses, which carry stocks and make sales direct to customers. Sales offices which merely arrange sales but do not carry stock, or which carry small quantities only for demonstration purposes, are not included. Sales for this series represent direct sales from the outlet of goods manufactured by the owning or associated manufacturing company, with sales arranged by outlets but shipped direct from plant excluded wherever possible; goods purchased for re-sale from sources other than the owning or associated manufacturing company are also excluded except for the Petroleum Products industry group where a separation of purchased products is not feasible. Inventories for this series represents owned inventories held at Trading Outlets or in warehouses serving the trading outlets; again, goods purchased for re-sale are excluded except for the Petroleum Products industry.

Industries and Groupings - All individual industries (Table 5) and the Standard Industrial Classification groupings of industries used in Tables 3, 6 and 7, are defined according to the Standard Industrial Classification Manual. A list of the industries included in the Standard Industrial Classification groups and in the Economic-Use groupings of industries (Tables 4, and 6) will be found on page 53 of the bulletin.

### SOURCES

Monthly (or, in a few cases, quarterly) reports covering value of inventories and shipments are now submitted on a voluntary basis by 3,000 plants in 120 industries; in addition, 3,000 small plants in 100 of these industries report monthly shipments only. Of the first group, 1,025 plants in 83 industries also report new and unfilled orders. Four industries are included in the total shipments estimates by using data available from other Bureau series, and two of these are also included in the total inventory estimates.

FOOTNOTES TO TABLES

TABLE 1. - (1) Prince Edward Island and Nova Scotia combined for monthly estimates.

(2) Yukon and the Northwest Territories combined with British Columbia.

TABLE 2. - (1) Annual shipments values differ slightly from published Census of Industry totals due to inventory adjustments for certain industries where Census of Industry data represent production rather than shipments values.

(2) Part of the change in values from December 1958 to January 1959, is the result of the discontinuing of Trading Outlet operations for goods of own manufacture by some of the establishments reporting in the Electrical Apparatus Industries groups. The sales and inventories previously shown in Trading Outlets are now included in the relevant manufacturing industries and industrial groups.

(3) Part of the change in shipments and finished products inventory values from December, 1961 to January, 1962 is the result of the change in the method of reporting by some of the establishments in the Rubber Industries following the revision in the definition of a manufacturing establishment. Sales and inventories previously shown in Trading Outlets under Rubber Industries are now included in manufacturing since the redefinition of the manufacturing establishment has eliminated most of the manufacturers' trading outlets in this industry.

TABLE 3. - (1) See footnote (1), table 2.

(2) The value of Unfilled Orders and therefore, of New Orders for industries in S.I.C. groups - 1, 2, 3, 7, 8, 12, 14, 15, 16 and 17 is small, and sample coverage is not adequate to provide separate estimates for them.

(3) See footnote (2), table 2.

(4) The value of inventory held but not owned in this group is very small, and sample coverage is not adequate to provide separate data. Estimates for this type of inventory are included with Total Inventory Held; for all practical purposes this can be considered the equivalent of Inventory Owned.

(5) See footnote (3), table 2.

TABLE 4. - (1) See footnote (2), table 2.

(2) This grouping does not include the consumer portion of Motor Vehicles, nor of Heating and Cooking Apparatus; it does include the electronic equipment portion of Radios and Parts, (Telecommunication Equipment), and the office and store portion of Furniture. The bulk of Inventory Held but not Owned in this group is applicable to the electronic equipment portion of Radios and Parts.

(3) This grouping does not include trucks and buses.

(4) This group comprises only the 6 industries which cannot be fitted into any of the other groups because of the high proportion of total production exported. Shipments are not to be taken as total exports.

(5) See footnote (3), table 2.

TABLE 6. - (1) Ratios for this group were calculated using values of Total Inventory Held instead of values of Total Inventory Owned. See footnote (4), table 3.

TABLE 7. - (1) Includes sales and inventories of purchased goods for the Petroleum Refining Industry.

(2) See footnote (2), table 2.

(3) This grouping includes industries from the Textile group, the Clothing group, the Transportation Equipment group, the Non-Ferrous Metal Products group, the Non-Metallic Mineral Products group, and the Miscellaneous Industries group. The Leather Products group and the Printing, Publishing and Allied Industries group are not included since no firms in these industries reported Trading Outlets. The Tobacco Products group is not included because Trading Outlet values cannot be separated from plant values.

# ESTIMATED VALUES OF SHIPMENTS, INVENTORY OWNED, AND ORDERS IN ALL MANUFACTURING INDUSTRIES

## TREND SUMMARY

Manufacturers' shipments in September were valued at an estimated \$2,218.5 million bringing total shipments in the third quarter of the year to \$6,505.3 million as compared with \$6,163.4 million in the third quarter of 1961. The higher level of shipments this quarter is 5.5 per cent above shipments in 1961 as compared with a level 9.5 per cent higher in the first quarter and 9.8 per cent higher in the second. The decline in comparative values not only reflects the decline in July and August shipments this year but also reflects the increase in shipments in 1961 which began in March and carried through into November with seasonal declines in April and July.

If the shipments values are compared after adjustment for seasonal variation the first large decline in the steady upward trend occurred in August of this year. The usual decline in July was less than expected and the recovery in August was lower. Since the largest declines were shown in the motor vehicle, clothing and the construction goods industries it may reflect a shifting seasonal pattern but is more likely the result of different factors depending on the industry. Shipments in the automotive industries had been running nearly one third higher than the previous year until August when they dropped back to 14 per cent higher but the decline in this one month does not appear significant as shipments are up again in September by 20 per cent over last year and the cumulative value for 1962 is 1.6 more than in the previous year. The construction goods industries fell off both in April and July which again may be seasonal or it may, in July, reflect the tighter money situation which prevailed during the summer from the increase in the bank rate in June. Shipments in the clothing industry have been running between three and six per cent above last year, at a much lower level comparatively than shipments in textiles, at 8 to 11 per cent higher, and also lower than shipments in the leather and rubber products industries. The higher level of shipments in the textile industries may reflect the growing trend toward carpeting and the heavy demands here for apartment and office building use.

Inventories owned and inventories held by manufacturers at the end of September at \$4,558.5 million and \$4,850.5 million respectively were both 0.4 per cent higher than the revised estimates of \$4,541.3 million and \$4,831.2 million at the end of August. Inventories held increased significantly more, 7.9 per cent, than inventories owned, 6.4 per cent, over the level at September 1961 as a result of the very large increase in inventories held under progress payments arrangements. Inventories held under progress payment at the end of September at 292 million have risen 40 per cent in the last year with the increase concentrated in the second quarter of this year. The increase is largely in the heavy transportation industries with some in the construction industries.

The upward movement in manufacturing inventories which began in July 1961 has, when considered in the seasonally adjusted series for inventories held, shown an unusually smooth upward climb. The total increase from June 1961 to the end of September is nine per cent with the greatest increase being shown in this quarter, with a three per cent rise. Only one other quarter has approached this and that was the fourth quarter of 1961 when inventories at the end of December were 2.4 per cent higher than at the end of September that year. In each of the remaining quarters the increase was one per cent or only slightly more.

The smoothness in the series derives largely from the trend in raw materials although it also reflects the divergent but compensating movements of the three components. The decline in raw materials inventory in January and February this year was offset by the increase in goods in process inventory; the slower rate of increase in inventories in the second quarter reflects the decline in finished goods inventory during this time.

The ratio of finished goods inventory to shipments turned up in August this year in comparison with the ratio in 1961 and was higher again in September at 0.66 as compared with 0.65. The average quarterly ratio was 4.0 points lower in the first quarter, 3.7 points lower in the second and 0.3 points higher in the third quarter this year as compared with last.

The decline in unfilled orders in September was general with the exception of the automotive industries where the rise, 3.1 per cent was exactly equal to the total decline. The decline is, however much less than usually shown in September for the seasonally adjusted series a decline of less

than one per cent from August. The level as compared with September 1961 is nearly 10 per cent higher in both the seasonally adjusted and the unadjusted series.

The month to month change in the level of unfilled orders has been somewhat less regular in the motor vehicles and related industries group this year as compared with other years and the increase this month is quite unusual as unfilled orders in September normally remain at the August level or show a decline. The decline in unfilled orders in the construction industry however appears to be following the regular movement downward which begins in the late summer each year. The increase in unfilled orders in March this year was somewhat unusual and although unfilled orders have been significantly higher than in 1961 during this year they have fallen off somewhat since July.

# INDUSTRIAL GROUPINGS

The industries shown in the Standard Industrial Classification Groups and the Economic Use Groups are listed below.

A single asterisk (\*) preceding the individual industry title indicates that the industry is shown separately in Table 5 - Statistics for Selected Individual Industries.

A double asterisk (\*\*) preceding the individual industry title indicates that the industry is shown in Table 5 combined with one or more other industries. The industries grouped are listed in footnotes to the table.

The bracketed letters following the individual industry titles indicate the statistical series - shipments, inventories and orders-in which the industry is included monthly: (s) means the industry is included in the shipments series; (i) in the inventory series; and (o) in the orders series. Industries for which monthly coverage is not indicated are included in the all-industry and group totals estimates as described in the October 1961 report, page 82.

## CONCEPTS AND SOURCES

For further detail, and for description of methods used, see October, 1961 report, page 82.

### CONCEPTS

Shipments - (Tables 1 to 5) - represent an estimated projection, on a monthly basis, of the latest available Census of Industry values.

New Orders - (Tables 2 to 5) - This series is designed to indicate the rate at which new business is being received. It is defined as all New Orders Received during the period, at estimated selling values. Thus it covers total new orders, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month (and, therefore, will also be reported as shipments in the month received) or whether they will be added to existing backlogs.

Unfilled Orders - (Tables 2 to 5) - are defined at estimated selling value, at the end of the period stated, of orders received but not yet shipped (or treated as a sale), irrespective of work done on them or of stocks from which they can be filled.

Total Inventory Owned - (Tables 2 to 5) - represents the estimated book value of inventory owned by manufacturers in connection with manufacturing operations, whether held at plant or not, at the end of the period stated. It is made up of: raw materials, goods in process, finished goods of own manufacture at plant and warehouse, less value of inventory held but not owned which cannot be assigned to specific components. Since the series relates to manufacturing inventory only, value of goods purchased for re-sale is not included.

Inventory Held but Not Owned - (Tables 2 to 5) - represents, as far as possible, the portion of manufacturers' total inventory holdings which are no longer owned by the reporting manufacturers because of payments made on long-term contracts as work on these progresses. This item is applicable only to the relatively few industries where long-term contracts are common although, because of the nature of the item, the value per industry is high.

Because of variations in accounting methods there are a few cases where it is not possible to obtain values for this type of inventory. The estimated value shown for this item must therefore be considered to some extent incomplete.

Total Inventory Held - (Tables 2 to 5) - represents the estimated total value of manufacturers' inventory holdings in connection with manufacturing operations, regardless of ownership; it differs from inventory owned by the inclusion of amounts held under progress payments arrangements.

Inventory Components - (Tables 2 to 5) - (Raw Materials, Goods in Process, and Finished Products) are reported and compiled as on the books of each manufacturer, i.e. there has been no attempt to define the components specifically for each industry.

The inventory components are always a breakdown of total inventory held, not of total inventory owned. In industries where these two items differ, due to the inclusion of inventory held but not owned (see above), it is not possible to obtain value of inventory owned by components since, where separate progress accounts are maintained, firms concerned can only state that, of total holdings, a certain amount is no longer owned by them. It is fairly obvious that the bulk of such payments apply to goods in process holdings but due to time lags in shipments and to prepayments some of the total value of inventory held but not owned would be applicable to finished products or raw materials.

Any comparisons of shipments/inventory ratios should be made using total inventory owned, not total inventory held, since the latter includes values which have already been written off to sales. If shipments inventory ratios are desired using inventory components, rather than total inventory, a reasonable approximation to total inventory owned by components would be obtained by assuming that all inventory held but not owned had been included with goods in process.

Trading Outlets - (Table 7) - are defined as any establishments (other than retail stores) operated by manufacturers, apart from their plants or plant-warehouses, which carry stocks and make sales direct to customers. Sales offices which merely arrange sales but do not carry stock, or which carry small quantities only for demonstration purposes, are not included. Sales for this series represent direct sales from the outlet of goods manufactured by the owning or associated manufacturing company, with sales arranged by outlets but shipped direct from plant excluded wherever possible; goods purchased for re-sale from sources other than the owning or associated manufacturing company are also excluded except for the Petroleum Products industry group where a separation of purchased products is not feasible. Inventories for this series represents owned inventories held at Trading Outlets or in warehouses serving the trading outlets; again, goods purchased for re-sale are excluded except for the Petroleum Products industry.

Industries and Groupings - All individual industries (Table 5) and the Standard Industrial Classification groupings of industries used in Tables 3, 6 and 7, are defined according to the Standard Industrial Classification Manual. A list of the industries included in the Standard Industrial Classification groups and in the Economic-Use groupings of industries (Tables 4, and 6) will be found on page 53 of the bulletin.

### SOURCES

Monthly (or, in a few cases, quarterly) reports covering value of inventories and shipments are now submitted on a voluntary basis by 3,000 plants in 120 industries; in addition, 3,000 small plants in 100 of these industries report monthly shipments only. Of the first group, 1,025 plants in 83 industries also report new and unfilled orders. Four industries are included in the total shipments estimates by using data available from other Bureau series, and two of these are also included in the total inventory estimates.

FOOTNOTES TO TABLES

TABLE 1. - (1) Prince Edward Island and Nova Scotia combined for monthly estimates.

(2) Yukon and the Northwest Territories combined with British Columbia.

TABLE 2. - (1) Annual shipments values differ slightly from published Census of Industry totals due to inventory adjustments for certain industries where Census of Industry data represent production rather than shipments values.

(2) Part of the change in values from December 1958 to January 1959, is the result of the discontinuing of Trading Outlet operations for goods of own manufacture by some of the establishments reporting in the Electrical Apparatus Industries groups. The sales and inventories previously shown in Trading Outlets are now included in the relevant manufacturing industries and industrial groups.

(3) Part of the change in shipments and finished products inventory values from December, 1961 to January, 1962 is the result of the change in the method of reporting by some of the establishments in the Rubber Industries following the revision in the definition of a manufacturing establishment. Sales and inventories previously shown in Trading Outlets under Rubber Industries are now included in manufacturing since the redefinition of the manufacturing establishment has eliminated most of the manufacturers' trading outlets in this industry.

TABLE 3. - (1) See footnote (1), table 2.

(2) The value of Unfilled Orders and therefore, of New Orders for industries in S.I.C. groups - 1, 2, 3, 7, 8, 12, 14, 15, 16 and 17 is small, and sample coverage is not adequate to provide separate estimates for them.

(3) See footnote (2), table 2.

(4) The value of inventory held but not owned in this group is very small, and sample coverage is not adequate to provide separate data. Estimates for this type of inventory are included with Total Inventory Held; for all practical purposes this can be considered the equivalent of Inventory Owned.

(5) See footnote (3), table 2.

TABLE 4. - (1) See footnote (2), table 2.

(2) This grouping does not include the consumer portion of Motor Vehicles, nor of Heating and Cooking Apparatus; it does include the electronic equipment portion of Radios and Parts, (Telecommunication Equipment), and the office and store portion of Furniture. The bulk of Inventory Held but not Owned in this group is applicable to the electronic equipment portion of Radios and Parts.

(3) This grouping does not include trucks and buses.

(4) This group comprises only the 6 industries which cannot be fitted into any of the other groups because of the high proportion of total production exported. Shipments are not to be taken as total exports.

(5) See footnote (3), table 2.

TABLE 6. - (1) Ratios for this group were calculated using values of Total Inventory Held instead of values of Total Inventory Owned. See footnote (4), table 3.

TABLE 7. - (1) Includes sales and inventories of purchased goods for the Petroleum Refining Industry.

(2) See footnote (2), table 2.

(3) This grouping includes industries from the Textile group, the Clothing group, the Transportation Equipment group, the Non-Ferrous Metal Products group, the Non-Metallic Mineral Products group, and the Miscellaneous Industries group. The Leather Products group and the Printing, Publishing and Allied Industries group are included since no firms in these industries reported Trading Outlets. The Tobacco Products group is not included because Trading Outlet values cannot be separated from plant values.

# ESTIMATED VALUES OF SHIPMENTS, INVENTORY OWNED, AND ORDERS IN ALL MANUFACTURING INDUSTRIES

# OCTOBER SUMMARY

Manufacturers' shipments in October were valued at an estimated \$2,331.8 million, up 5.2 per cent from the revised September value of \$2,216.1 million and up 9.1 per cent from the \$2,137.6 million reported in October 1961. Shipments in the January - October period were valued at \$21,418.5 million, 4 per cent higher than the corresponding 1961 total of \$19,764.9 million.

The seasonally revised series indicates the increase in October to be less than usual, as the seasonally adjusted value, at \$2,160.3 million, is 1.4 per cent lower than the revised seasonally adjusted September total. The October value, however, is over five per cent higher than a year ago.

Inventories owned by manufacturers' at the end of October were practically unchanged from the revised September estimate at \$4,582.6 million versus \$4,581.0 million, but were 5.3 per cent higher than last year's October total of \$4,350.3 million. Inventories held by manufacturers' at the end of October, at \$4,874.1 million, were fractionally lower than the revised September estimate of \$4,877.4 million and 7.2 per cent higher than the October 1961 estimate of \$4,548.0 million.

The ratio of total inventory-to-shipments was 1.97 in October versus 2.07 in September and 2.04 in October 1961. The ratio of finished products-to-shipments was 0.63 in October against 0.67 in September and 0.65 a year ago.

In the seasonally adjusted series, the shifts in October were insignificant in comparison with September.

New orders in October were valued at an estimated \$2,304.8 million, up 6.8 per cent from the revised September estimate of \$2,157.8 million and up 9.4 per cent from the October 1961 total of \$2,106.5 million. Unfilled orders were estimated in October at \$2,035.4 million, down 1.3 per cent from the revised September estimate of \$2,062.4 million but up 10.4 per cent from the October 1961 estimate of \$1,843.9 million.

The following table shows estimated value of shipments, inventories and orders in all manufacturing industries.

Revised figures.

Provincial Shipments- Shipments were higher in value in October this year as compared to last in eight of the ten provinces, as follows: Prince Edward Island and Nova Scotia, 20.5 per cent; Quebec 8.1 per cent; Ontario, 11.8 per cent; Manitoba, 1.0 per cent; Saskatchewan, 3.0 per cent; Alberta, 3.3 per cent; and British Columbia, 5.5 per cent. Declines of 0.8 per cent and 8.0 per cent were recorded in Newfoundland and New Brunswick, respectively.

Higher values of shipments in October this year as compared to last in Prince Edward Island and Nova Scotia reflects greater shipments in wood, iron and steel, transportation equipment and petroleum products industries; in Quebec to gains in textiles, wood, paper, iron and steel, and transportation equipment; in Ontario to advances in wood, paper, iron and steel, transportation equipment, electrical, and chemical products; in Alberta to increases in foods and beverages, wood, non-metallic minerals, and petroleum products that more than offset a substantial decrease in iron and steel; and in British Columbia to gains in wood, and paper products. The decline in New Brunswick was due to decreases in wood, and transportation equipment.

## INDUSTRIAL GROUPINGS

The industries shown in the Standard Industrial Classification Groups and the Economic Use Groups are listed below.

A single asterisk (\*) preceding the individual industry title indicates that the industry is shown separately in Table 5 - Statistics for Selected Individual Industries.

A double asterisk (\*\*) preceding the individual industry title indicates that the industry is shown in Table 5 combined with one or more other industries. The industries grouped are listed in footnotes to the table.

The bracketed letters following the individual industry titles indicate the statistical series - shipments, inventories and orders-in which the industry is included monthly: (s) means the industry is included in the shipments series; (i) in the inventory series; and (o) in the orders series. Industries for which monthly coverage is not indicated are included in the all-industry and group totals estimates as described in the October 1961 report, page 82.

## CONCEPTS AND SOURCES

For further detail, and for description of methods used, see October, 1961 report, page 82.

### CONCEPTS

Shipments - (Tables 1 to 5) - represent an estimated projection, on a monthly basis, of the latest available Census of Industry values.

New Orders - (Tables 2 to 5) - This series is designed to indicate the rate at which new business is being received. It is defined as all New Orders Received during the period, at estimated selling values. Thus it covers total new orders, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month (and, therefore, will also be reported as shipments in the month received) or whether they will be added to existing backlogs.

Unfilled Orders - (Tables 2 to 5) - are defined at estimated selling value, at the end of the period stated, of orders received but not yet shipped (or treated as a sale), irrespective of work done on them or of stocks from which they can be filled.

Total Inventory Owned - (Tables 2 to 5) - represents the estimated book value of inventory owned by manufacturers in connection with manufacturing operations, whether held at plant or not, at the end of the period stated. It is made up of: raw materials, goods in process, finished goods of own manufacture at plant and warehouse, less value of inventory held but not owned which cannot be assigned to specific components. Since the series relates to manufacturing inventory only, value of goods purchased for re-sale is not included.

Inventory Held but Not Owned - (Tables 2 to 5) - represents, as far as possible, the portion of manufacturers' total inventory holdings which are no longer owned by the reporting manufacturers because of payments made on long-term contracts as work on these progresses. This item is applicable only to the relatively few industries where long-term contracts are common although, because of the nature of the item, the value per industry is high.

Because of variations in accounting methods there are a few cases where it is not possible to obtain values for this type of inventory. The estimated value shown for this item must therefore be considered to some extent incomplete.

Total Inventory Held - (Tables 2 to 5) - represents the estimated total value of manufacturers' inventory holdings in connection with manufacturing operations, regardless of ownership; it differs from inventory owned by the inclusion of amounts held under progress payments arrangements.

Inventory Components - (Tables 2 to 5) - (Raw Materials, Goods in Process, and Finished Products) are reported and compiled as on the books of each manufacturer, i.e. there has been no attempt to define the components specifically for each industry.

The inventory components are always a breakdown of total inventory held, not of total inventory owned. In industries where these two items differ, due to the inclusion of inventory held but not owned (see above), it is not possible to obtain value of inventory owned by components since, where separate progress accounts are maintained, firms concerned can only state that, of total holdings, a certain amount is no longer owned by them. It is fairly obvious that the bulk of such payments apply to goods in process holdings but due to time lags in shipments and to prepayments some of the total value of inventory held but not owned would be applicable to finished products or raw materials.

Any comparisons of shipments/inventory ratios should be made using total inventory owned, not total inventory held, since the latter includes values which have already been written off to sales. If shipments inventory ratios are desired using inventory components, rather than total inventory, a reasonable approximation to total inventory owned by components would be obtained by assuming that all inventory held but not owned had been included with goods in process.

Trading Outlets - (Table 7) - are defined as any establishments (other than retail stores) operated by manufacturers, apart from their plants or plant-warehouses, which carry stocks and make sales direct to customers. Sales offices which merely arrange sales but do not carry stock, or which carry small quantities only for demonstration purposes, are not included. Sales for this series represent direct sales from the outlet of goods manufactured by the owning or associated manufacturing company, with sales arranged by outlets but shipped direct from plant excluded wherever possible; goods purchased for re-sale from sources other than the owning or associated manufacturing company are also excluded except for the Petroleum Products industry group where a separation of purchased products is not feasible. Inventories for this series represents owned inventories held at Trading Outlets or in warehouses serving the trading outlets; again, goods purchased for re-sale are excluded except for the Petroleum Products industry.

Industries and Groupings - All individual industries (Table 5) and the Standard Industrial Classification groupings of industries used in Tables 3, 6 and 7, are defined according to the Standard Industrial Classification Manual. A list of the industries included in the Standard Industrial Classification groups and in the Economic-Use groupings of industries (Tables 4, and 6) will be found on page 53 of the bulletin.

### SOURCES

Monthly (or, in a few cases, quarterly) reports covering value of inventories and shipments are now submitted on a voluntary basis by 3,000 plants in 120 industries; in addition, 3,000 small plants in 100 of these industries report monthly shipments only. Of the first group, 1,025 plants in 83 industries also report new and unfilled orders. Four industries are included in the total shipments estimates by using data available from other Bureau series, and two of these are also included in the total inventory estimates.

FOOTNOTES TO TABLES

TABLE 1. - (1) Prince Edward Island and Nova Scotia combined for monthly estimates.

(2) Yukon and the Northwest Territories combined with British Columbia.

TABLE 2. - (1) Annual shipments values differ slightly from published Census of Industry totals due to inventory adjustments for certain industries where Census of Industry data represent production rather than shipments values.

(2) Part of the change in values from December 1958 to January 1959, is the result of the discontinuing of Trading Outlet operations for goods of own manufacture by some of the establishments reporting in the Electrical Apparatus Industries groups. The sales and inventories previously shown in Trading Outlets are now included in the relevant manufacturing industries and industrial groups.

(3) Part of the change in shipments and finished products inventory values from December, 1961 to January, 1962 is the result of the change in the method of reporting by some of the establishments in the Rubber Industries following the revision in the definition of a manufacturing establishment. Sales and inventories previously shown in Trading Outlets under Rubber Industries are now included in manufacturing since the redefinition of the manufacturing establishment has eliminated most of the manufacturers' trading outlets in this industry.

TABLE 3. - (1) See footnote (1), table 2.

(2) The value of Unfilled Orders and therefore, of New Orders for industries in S.I.C. groups - 1, 2, 3, 7, 8, 12, 14, 15, 16 and 17 is small, and sample coverage is not adequate to provide separate estimates for them.

(3) See footnote (2), table 2.

(4) The value of inventory held but not owned in this group is very small, and sample coverage is not adequate to provide separate data. Estimates for this type of inventory are included with Total Inventory Held; for all practical purposes this can be considered the equivalent of Inventory Owned.

(5) See footnote (3), table 2.

TABLE 4. - (1) See footnote (2), table 2.

(2) This grouping does not include the consumer portion of Motor Vehicles, nor of Heating and Cooking Apparatus; it does include the electronic equipment portion of Radios and Parts, (Telecommunication Equipment), and the office and store portion of Furniture. The bulk of Inventory Held but not Owned in this group is applicable to the electronic equipment portion of Radios and Parts.

(3) This grouping does not include trucks and buses.

(4) This group comprises only the 6 industries which cannot be fitted into any of the other groups because of the high proportion of total production exported. Shipments are not to be taken as total exports.

(5) See footnote (3), table 2.

TABLE 6. - (1) Ratios for this group were calculated using values of Total Inventory Held instead of values of Total Inventory Owned. See footnote (4), table 3.

TABLE 7. - (1) Includes sales and inventories of purchased goods for the Petroleum Refining Industry.

(2) See footnote (2), table 2.

(3) This grouping includes industries from the Textile group, the Clothing group, the Transportation Equipment group, the Non-Ferrous Metal Products group, the Non-Metallic Mineral Products group, and the Miscellaneous Industries group. The Leather Products group and the Printing, Publishing and Allied Industries group are not included since no firms in these industries reported Trading Outlets. The Tobacco Products group is not included because Trading Outlet values cannot be separated from plant values.

(4) See footnote (3), table 2.

# ESTIMATED VALUES OF SHIPMENTS, INVENTORY OWNED, AND ORDERS IN ALL MANUFACTURING INDUSTRIES

TREND SUMMARY

Manufacturers' shipments in November were valued at an estimated \$2,312.2 million which is slightly lower, 1.6%, than the revised value of shipments in October of \$2,350.8 million. It is, however, 7.6 per cent higher than the value of shipments in the corresponding month in 1961. The seasonally adjusted values for November show shipments higher than usual in this month with an increase of nearly two per cent over October and nearly eight per cent as compared with the previous year.

The steady rise in manufacturers' shipments which began in March 1961 following three years of relatively unchanging values shows up very sharply in the cumulative shipments in this year; the increase in the last nine months of 1961 although sharper than in any period in 1962 was obscured in the cumulative values because of the declines in the first quarter. Shipments in the past eleven months this year are eight per cent higher than in the corresponding months in 1961; comparing the past four years with 1958, for the first eleven months of each year, shipments in 1959 and 1960 were five per cent higher in each year, shipments in 1961 were seven per cent higher than 1958 while shipments in this past year are 16 per cent above the 1958 level. The plateau is even more marked in the durable goods industries than in the non-durable goods industries; in the former shipments were a steady seven per cent higher in each of the three years 1959 to 1961 as compared with 1958 and have been 20 per cent higher in this past eleven months. In the non-durable goods industries shipments moved very slowly upward; they were 3.5 per cent higher in the first eleven months of 1959 as compared with the comparable period in 1958, 4.5 per cent higher in 1960 and eight per cent higher in 1961. This past eleven months are running 14 per cent above 1958 shipments, an increase of 5.5 per cent in this year as compared with last.

The sharp increase in shipments in the durable goods industries shows up also in the ratio of finished products inventories to shipments where levels in November in five of the six durable goods industry groups are very much below normal levels and in four of them, wood products industries, iron and steel products, transportation equipment and non metallic minerals are well below the yearly average for the eleven month period. The ratio of finished goods inventory to shipments in the electrical apparatus and supplies industries is usually at its lowest level in the late fall, as it is this year, and, while the ratio during this year has not reached as high a point as in the opening months of 1961, the average is not significantly lower.

Inventories owned by manufacturers' at the end of November were valued at an estimated \$4,594.0 million, fractionally higher than the \$4,590.4 million reported at the end of October and five per cent higher than the level at the end of November 1961 of \$4,376.3 million. Since inventories held under progress payments arrange-

ments fell by more than four per cent between October and November the level of total inventories held was fractionally lower, at \$4,869.4 million, than at the end of October when it was \$4,878.3 million.

The only component in inventories held to show an increase between October and November was raw materials which was 0.7 per cent higher; this increase however was slightly less than usual for November as the seasonally adjusted series shows a slight decline. Changes in raw materials inventories were fairly small in most of the industry groups except for the food industries; the durable goods industries registered a very slight decline and non-durable goods industries an increase of \$16.4 million or 1.3 per cent of which \$14.6 million an increase of four per cent in this group was in the food group.

Goods in process inventories were lower at the end of November than at the end of October this year but appear to be significantly higher than at the end of November 1961. In fact the level of goods in process inventory since the end of September has been at the level reached in the second quarter of 1957 and not attained since.

Unfilled orders on books at the end of November altho' fractionally lower than at the end of October and lower than normal for November have been running at a consistently higher level in the past year than in 1961 and indeed since the middle of 1960.

(1) Includes Pig Iron, Steel Ingots and Castings, Rolled Iron and Steel Products and Ferro-Alloys. (2) The value of inventory held but not owned in this industry is very small, and sample coverage is not adequate to provide separate data. Estimates of this type of inventory are included with total inventory held; for all practical purposes this can be considered the equivalent of inventory owned as well.

## INDUSTRIAL GROUPINGS

The industries shown in the Standard Industrial Classification Groups and the Economic Use Groups are listed below.

A single asterisk (\*) preceding the individual industry title indicates that the industry is shown separately in Table 5 - Statistics for Selected Individual Industries.

A double asterisk (\*\*) preceding the individual industry title indicates that the industry is shown in Table 5 combined with one or more other industries. The industries grouped are listed in footnotes to the table.

The bracketed letters following the individual industry titles indicate the statistical series - shipments, inventories and orders-in which the industry is included monthly: (s) means the industry is included in the shipments series; (i) in the inventory series; and (o) in the orders series. Industries for which monthly coverage is not indicated are included in the all-industry and group totals estimates as described in the October 1961 report, page 82.

## CONCEPTS AND SOURCES

For further detail, and for description of methods used, see October, 1961 report, page 82.

### CONCEPTS

Shipments - (Tables 1 to 5) - represent an estimated projection, on a monthly basis, of the latest available Census of Industry values.

New Orders - (Tables 2 to 5) - This series is designed to indicate the rate at which new business is being received. It is defined as all New Orders Received during the period, at estimated selling values. Thus it covers total new orders, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month (and, therefore, will also be reported as shipments in the month received) or whether they will be added to existing backlogs.

Unfilled Orders - (Tables 2 to 5) - are defined at estimated selling value, at the end of the period stated, of orders received but not yet shipped (or treated as a sale), irrespective of work done on them or of stocks from which they can be filled.

Total Inventory Owned - (Tables 2 to 5) - represents the estimated book value of inventory owned by manufacturers in connection with manufacturing operations, whether held at plant or not, at the end of the period stated. It is made up of: raw materials, goods in process, finished goods of own manufacture at plant and warehouse, less value of inventory held but not owned which cannot be assigned to specific components. Since the series relates to manufacturing inventory only, value of goods purchased for re-sale is not included.

Inventory Held but Not Owned - (Tables 2 to 5) - represents, as far as possible, the portion of manufacturers' total inventory holdings which are no longer owned by the reporting manufacturers because of payments made on long-term contracts as work on these progresses. This item is applicable only to the relatively few industries where long-term contracts are common although, because of the nature of the item, the value per industry is high.

Because of variations in accounting methods there are a few cases where it is not possible to obtain values for this type of inventory. The estimated value shown for this item must therefore be considered to some extent incomplete.

Total Inventory Held - (Tables 2 to 5) - represents the estimated total value of manufacturers' inventory holdings in connection with manufacturing operations, regardless of ownership; it differs from inventory owned by the inclusion of amounts held under progress payments arrangements.

Inventory Components - (Tables 2 to 5) - (Raw Materials, Goods in Process, and Finished Products) are reported and compiled as on the books of each manufacturer, i.e. there has been no attempt to define the components specifically for each industry.

The inventory components are always a breakdown of total inventory held, not of total inventory owned. In industries where these two items differ, due to the inclusion of inventory held but not owned (see above), it is not possible to obtain value of inventory owned by components since, where separate progress accounts are maintained, firms concerned can only state that, of total holdings, a certain amount is no longer owned by them. It is fairly obvious that the bulk of such payments apply to goods in process holdings but due to time lags in shipments and to prepayments some of the total value of inventory held but not owned would be applicable to finished products or raw materials.

Any comparisons of shipments/inventory ratios should be made using total inventory owned, not total inventory held, since the latter includes values which have already been written off to sales. If shipments inventory ratios are desired using inventory components, rather than total inventory, a reasonable approximation to total inventory owned by components would be obtained by assuming that all inventory held but not owned had been included with goods in process.

Trading Outlets - (Table 7) - are defined as any establishments (other than retail stores) operated by manufacturers, apart from their plants or plant-warehouses, which carry stocks and make sales direct to customers. Sales offices which merely arrange sales but do not carry stock, or which carry small quantities only for demonstration purposes, are not included. Sales for this series represent direct sales from the outlet of goods manufactured by the owning or associated manufacturing company, with sales arranged by outlets but shipped direct from plant excluded wherever possible; goods purchased for re-sale from sources other than the owning or associated manufacturing company are also excluded except for the Petroleum Products industry group where a separation of purchased products is not feasible. Inventories for this series represents owned inventories held at Trading Outlets or in warehouses serving the trading outlets; again, goods purchased for re-sale are excluded except for the Petroleum Products industry.

Industries and Groupings - All individual industries (Table 5) and the Standard Industrial Classification groupings of industries used in Tables 3, 6 and 7, are defined according to the Standard Industrial Classification Manual. A list of the industries included in the Standard Industrial Classification groups and in the Economic-Use groupings of industries (Tables 4, and 6) will be found on page 53 of the bulletin.

### SOURCES

Monthly (or, in a few cases, quarterly) reports covering value of inventories and shipments are now submitted on a voluntary basis by 3,000 plants in 120 industries; in addition, 3,000 small plants in 100 of these industries report monthly shipments only. Of the first group, 1,025 plants in 83 industries also report new and unfilled orders. Four industries are included in the total shipments estimates by using data available from other Bureau series, and two of these are also included in the total inventory estimates.

FOOTNOTES TO TABLES

TABLE 1. - (1) Prince Edward Island and Nova Scotia combined for monthly estimates.

(2) Yukon and the Northwest Territories combined with British Columbia.

TABLE 2. - (1) Annual shipments values differ slightly from published Census of Industry totals due to inventory adjustments for certain industries where Census of Industry data represent production rather than shipments values.

(2) Part of the change in values from December 1958 to January 1959, is the result of the discontinuing of Trading Outlet operations for goods of own manufacture by some of the establishments reporting in the Electrical Apparatus Industries groups. The sales and inventories previously shown in Trading Outlets are now included in the relevant manufacturing industries and industrial groups.

(3) Part of the change in shipments and finished products inventory values from December, 1961 to January, 1962 is the result of the change in the method of reporting by some of the establishments in the Rubber Industries following the revision in the definition of a manufacturing establishment. Sales and inventories previously shown in Trading Outlets under Rubber Industries are now included in manufacturing since the redefinition of the manufacturing establishment has eliminated most of the manufacturers' trading outlets in this industry.

TABLE 3. - (1) See footnote (1), table 2.

(2) The value of Unfilled Orders and therefore, of New Orders for industries in S.I.C. groups - 1, 2, 3, 7, 8, 12, 14, 15, 16 and 17 is small, and sample coverage is not adequate to provide separate estimates for them.

(3) See footnote (2), table 2.

(4) The value of inventory held but not owned in this group is very small, and sample coverage is not adequate to provide separate data. Estimates for this type of inventory are included with Total Inventory Held; for all practical purposes this can be considered the equivalent of Inventory Owned.

(5) See footnote (3), table 2.

TABLE 4. - (1) See footnote (2), table 2.

(2) This grouping does not include the consumer portion of Motor Vehicles, nor of Heating and Cooking Apparatus; it does include the electronic equipment portion of Radios and Parts, (Telecommunication Equipment), and the office and store portion of Furniture. The bulk of Inventory Held but not Owned in this group is applicable to the electronic equipment portion of Radios and Parts.

(3) This grouping does not include trucks and buses.

(4) This group comprises only the 6 industries which cannot be fitted into any of the other groups because of the high proportion of total production exported. Shipments are not to be taken as total exports.

(5) See footnote (3), table 2.

TABLE 6. - (1) Ratios for this group were calculated using values of Total Inventory Held instead of values of Total Inventory Owned. See footnote (4), table 3.

TABLE 7. - (1) Includes sales and inventories of purchased goods for the Petroleum Refining Industry.

(2) See footnote (2), table 2.

(3) This grouping includes industries from the Textile group, the Clothing group, the Transportation Equipment group, the Non-Ferrous Metal Products group, the Non-Metallic Mineral Products group, and the Miscellaneous Industries group. The Leather Products group and the Printing, Publishing and Allied Industries group are not included since no firms in these industries reported Trading Outlets. The Tobacco Products group is not included because Trading Outlet values cannot be separated from plant values.

(4) See footnote (3), table 2.

# ESTIMATED VALUES OF SHIPMENTS, INVENTORY OWNED, AND ORDERS IN ALL MANUFACTURING INDUSTRIES

DECEMBER SUMMARY

Manufacturers' shipments in December were valued at an estimated \$2,106.9 million, down 7.8% from the preceding month's revised estimate of \$2,286.2 million, and up 6.9% from the December 1961 value of \$1,970.6 million. The value of shipments for the year 1962 at \$25,830.6 million was 8.1% higher than the \$23,884.8 million reported in 1961.

The December decline was, however, less than usual as the seasonally adjusted series shows an increase over the month of 2.3%. The comparison with December 1961 values is the same, an increase of 6.9% as shown by the unadjusted values.

Manufacturers' shipments were higher in value in December 1962 as compared to a year earlier in the following provinces: Prince Edward Island and Nova Scotia, 3.7%; New Brunswick, 0.8%; Quebec, 6.0%; Ontario, 8.4%; Saskatchewan, 2.2%; Alberta, 7.6%; and British Columbia, 10.8%. Declines of 5.8% and 3.2% were recorded in Newfoundland and Manitoba, respectively.

Higher values in December 1962 versus December 1961 in Prince Edward Island and Nova Scotia reflected increases in transportation equipment and petroleum products industries; in Quebec to advances in foods and beverages, textiles, paper, non-ferrous metals and petroleum products; in Ontario to gains in rubber, wood, iron and steel, transportation, electrical, and chemical products; in Alberta to increases in foods and beverages, iron and steel, non-metallic minerals, and petroleum products; and in British Columbia to higher values in wood, paper, iron and steel and transportation equipment industries. The decline in Newfoundland was due to decreased shipments in the paper products industry, while a decline in Manitoba in non-ferrous metal products accounted for the lower shipments values.

Inventories owned by manufacturers at the end of December were estimated at \$4,634.5 million, up 0.6% from the revised November estimate of \$4,604.7 million and up 4.6% from the \$4,431.6 million reported a year ago. Inventories held by manufacturers at the end of December were estimated at \$4,911.5 million, up 0.8% from the preceding month's revised estimate of \$4,873.4 million and up 5.7% from the December 1961 value of \$4,646.0 million. Raw materials increased fractionally from November to December and goods in process and finished products increased 1.0% and 1.3%, respectively. The ratio of total inventory owned to shipments was 2.20 in December, 2.01 in November and 2.25 in December 1961. The ratio of finished products to shipments was 0.71 in December, 0.64 in November and 0.71 in December 1961.

New orders received by manufacturers in December were estimated at \$2,122.0 million, down 6.9% from the revised November estimate of \$2,278.6 million but up 6.3% from the \$1,996.1 million in December 1961. Value of unfilled orders in December was estimated at \$2,020.2 million, 0.8% higher than the revised November estimate of \$2,005.1 million and 4.4% higher than the December 1961 estimate of \$1,934.9 million.

Note: The estimated value of shipments for 1961 for New Brunswick, which resulted in comparatively lower shipments for each month in 1962, was incorrect and has been reduced by \$30 million for the year to \$343.2 million. This gives an estimated decline in 1962 shipments of 1.2% as compared with a decline based on the former incorrect 1961 values of nearly 10%.

(1) Includes Pig Iron, Steel Ingots and Castings, Rolled Iron and Steel Products and Ferro-Alloys. (2) The value of inventory held but not owned in this industry is very small, and sample coverage is not adequate to provide separate data. Estimates of this type of inventory are included with total inventory held; for all practical purposes this can be considered the equivalent of inventory owned as well.

## INDUSTRIAL GROUPINGS

The industries shown in the Standard Industrial Classification Groups and the Economic Use Groups are listed below.

A single asterisk (\*) preceding the individual industry title indicates that the industry is shown separately in Table 5 - Statistics for Selected Individual Industries.

A double asterisk (\*\*) preceding the individual industry title indicates that the industry is shown in Table 5 combined with one or more other industries. The industries grouped are listed in footnotes to the table.

The bracketed letters following the individual industry titles indicate the statistical series - shipments, inventories and orders-in which the industry is included monthly: (s) means the industry is included in the shipments series; (i) in the inventory series; and (o) in the orders series. Industries for which monthly coverage is not indicated are included in the all-industry and group totals estimates as described in the October 1961 report, page 82.

## CONCEPTS AND SOURCES

For further detail, and for description of methods used, see October, 1961 report, page 82.

### CONCEPTS

Shipments - (Tables 1 to 5) - represent an estimated projection, on a monthly basis, of the latest available Census of Industry values.

New Orders - (Tables 2 to 5) - This series is designed to indicate the rate at which new business is being received. It is defined as all New Orders Received during the period, at estimated selling values. Thus it covers total new orders, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month (and, therefore, will also be reported as shipments in the month received) or whether they will be added to existing backlogs.

Unfilled Orders - (Tables 2 to 5) - are defined at estimated selling value, at the end of the period stated, of orders received but not yet shipped (or treated as a sale), irrespective of work done on them or of stocks from which they can be filled.

Total Inventory Owned - (Tables 2 to 5) - represents the estimated book value of inventory owned by manufacturers in connection with manufacturing operations, whether held at plant or not, at the end of the period stated. It is made up of: raw materials, goods in process, finished goods of own manufacture at plant and warehouse, less value of inventory held but not owned which cannot be assigned to specific components. Since the series relates to manufacturing inventory only, value of goods purchased for re-sale is not included.

Inventory Held but Not Owned - (Tables 2 to 5) - represents, as far as possible, the portion of manufacturers' total inventory holdings which are no longer owned by the reporting manufacturers because of payments made on long-term contracts as work on these progresses. This item is applicable only to the relatively few industries where long-term contracts are common although, because of the nature of the item, the value per industry is high.

Because of variations in accounting methods there are a few cases where it is not possible to obtain values for this type of inventory. The estimated value shown for this item must therefore be considered to some extent incomplete.

Total Inventory Held - (Tables 2 to 5) - represents the estimated total value of manufacturers' inventory holdings in connection with manufacturing operations, regardless of ownership; it differs from inventory owned by the inclusion of amounts held under progress payments arrangements.

Inventory Components - (Tables 2 to 5) - (Raw Materials, Goods in Process, and Finished Products) are reported and compiled as on the books of each manufacturer, i.e. there has been no attempt to define the components specifically for each industry.

The inventory components are always a breakdown of total inventory held, not of total inventory owned. In industries where these two items differ, due to the inclusion of inventory held but not owned (see above), it is not possible to obtain value of inventory owned by components since, where separate progress accounts are maintained, firms concerned can only state that, of total holdings, a certain amount is no longer owned by them. It is fairly obvious that the bulk of such payments apply to goods in process holdings but due to time lags in shipments and to prepayments some of the total value of inventory held but not owned would be applicable to finished products or raw materials.

Any comparisons of shipments/inventory ratios should be made using total inventory owned, not total inventory held, since the latter includes values which have already been written off to sales. If shipments inventory ratios are desired using inventory components, rather than total inventory, a reasonable approximation to total inventory owned by components would be obtained by assuming that all inventory held but not owned had been included with goods in process.

Trading Outlets - (Table 7) - are defined as any establishments (other than retail stores) operated by manufacturers, apart from their plants or plant-warehouses, which carry stocks and make sales direct to customers. Sales offices which merely arrange sales but do not carry stock, or which carry small quantities only for demonstration purposes, are not included. Sales for this series represent direct sales from the outlet of goods manufactured by the owning or associated manufacturing company, with sales arranged by outlets but shipped direct from plant excluded wherever possible; goods purchased for re-sale from sources other than the owning or associated manufacturing company are also excluded except for the Petroleum Products industry group where a separation of purchased products is not feasible. Inventories for this series represents owned inventories held at Trading Outlets or in warehouses serving the trading outlets; again, goods purchased for re-sale are excluded except for the Petroleum Products industry.

Industries and Groupings - All individual industries (Table 5) and the Standard Industrial Classification groupings of industries used in Tables 3, 6 and 7, are defined according to the Standard Industrial Classification Manual. A list of the industries included in the Standard Industrial Classification groups and in the Economic-Use groupings of industries (Tables 4, and 6) will be found on page 53 of the bulletin.

### SOURCES

Monthly (or, in a few cases, quarterly) reports covering value of inventories and shipments are now submitted on a voluntary basis by 3,000 plants in 120 industries; in addition, 3,000 small plants in 100 of these industries report monthly shipments only. Of the first group, 1,025 plants in 83 industries also report new and unfilled orders. Four industries are included in the total shipments estimates by using data available from other Bureau series, and two of these are also included in the total inventory estimates.

FOOTNOTES TO TABLES

TABLE 1. - (1) Prince Edward Island and Nova Scotia combined for monthly estimates.

(2) Yukon and the Northwest Territories combined with British Columbia.

TABLE 2. - (1) Annual shipments values differ slightly from published Census of Industry totals due to inventory adjustments for certain industries where Census of Industry data represent production rather than shipments values.

(2) Part of the change in values from December 1958 to January 1959, is the result of the discontinuing of Trading Outlet operations for goods of own manufacture by some of the establishments reporting in the Electrical Apparatus Industries groups. The sales and inventories previously shown in Trading Outlets are now included in the relevant manufacturing industries and industrial groups.

(3) Part of the change in shipments and finished products inventory values from December, 1961 to January, 1962 is the result of the change in the method of reporting by some of the establishments in the Rubber Industries following the revision in the definition of a manufacturing establishment. Sales and inventories previously shown in Trading Outlets under Rubber Industries are now included in manufacturing since the redefinition of the manufacturing establishment has eliminated most of the manufacturers' trading outlets in this industry.

TABLE 3. - (1) See footnote (1), table 2.

(2) The value of Unfilled Orders and therefore, of New Orders for industries in S.I.C. groups - 1, 2, 3, 7, 8, 12, 14, 15, 16 and 17 is small, and sample coverage is not adequate to provide separate estimates for them.

(3) See footnote (2), table 2.

(4) The value of inventory held but not owned in this group is very small, and sample coverage is not adequate to provide separate data. Estimates for this type of inventory are included with Total Inventory Held; for all practical purposes this can be considered the equivalent of Inventory Owned.

(5) See footnote (3), table 2.

TABLE 4. - (1) See footnote (2), table 2.

(2) This grouping does not include the consumer portion of Motor Vehicles, nor of Heating and Cooking Apparatus; it does include the electronic equipment portion of Radios and Parts, (Telecommunication Equipment), and the office and store portion of Furniture. The bulk of Inventory Held but not Owned in this group is applicable to the electronic equipment portion of Radios and Parts.

(3) This grouping does not include trucks and buses.

(4) This group comprises only the 6 industries which cannot be fitted into any of the other groups because of the high proportion of total production exported. Shipments are not to be taken as total exports.

(5) See footnote (3), table 2.

TABLE 6. - (1) Ratios for this group were calculated using values of Total Inventory Held instead of values of Total Inventory Owned. See footnote (4), table 3.

TABLE 7. - (1) Includes sales and inventories of purchased goods for the Petroleum Refining Industry.

(2) See footnote (2), table 2.

(3) This grouping includes industries from the Textile group, the Clothing group, the Transportation Equipment group, the Non-Ferrous Metal Products group, the Non-Metallic Mineral Products group, and the Miscellaneous Industries group. The Leather Products group and the Printing, Publishing and Allied Industries group are not included since no firms in these industries reported Trading Outlets. The Tobacco Products group is not included because Trading Outlet values cannot be separated from plant values.

(4) See footnote (3), table 2.
